Additive Manufacturing in Industry 4.0 Vipin Kumar Sharma, Ashwani Kumar, Manoj Gupta, Vinod Kumar, Dinesh Kumar Sharma, Subodh Kumar Sharma, 2022-12-26 The text covers four important areas digital manufacturing modern manufacturing processes modeling and simulation in smart industry and nanotechnology It further presents mathematical models to represent physical phenomena and applies modern computing methods and simulations in analyzing the same The text covers key concepts such as abrasive flow machining AFM abrasive water jet AWJ machining and hybrid machining for micro nanomanufacturing It will serve as an ideal reference text for senior undergraduate graduate students and researchers in fields including mechanical engineering aerospace engineering manufacturing engineering and production engineering Features Discusses sustainable development aspects of additive manufacturing in industry 4 0 Studies electrochemical machining processes for micro machining Presents experimental Investigation of friction factor and heat transfer rate in the laminar regime Examines the mechanical and microstructural characterization of titanium chips using large strain machining Covers hybrid approaches like electrochemical machining and magnetic abrasive flow machining The book emphasizes linking the computer interface with the digital manufacturing process and their demonstration using commercially available software like Solid Edge ProE and CATIA It further discusses important aspects of digital manufacturing advanced composites artificial intelligence and modern manufacturing processes **Smart Flow Control Processes in Micro Scale**

Volume 2 Bengt Sundén, Jin-yuan Qian, Junhui Zhang , 2020-12-29 In recent years microfluidic devices with a large surface to volume ratio have witnessed rapid development allowing them to be successfully utilized in many engineering applications A smart control process has been proposed for many years while many new innovations and enabling technologies have been developed for smart flow control especially concerning smart flow control at the microscale This Special Issue aims to highlight the current research trends related to this topic presenting a collection of 33 papers from leading scholars in this field Among these include studies and demonstrations of flow characteristics in pumps or valves as well as dynamic

performance in rolling mill systems or jet systems to the optimal design of special components in smart control systems

Noise And Vibration Control (Second Edition) M L Munjal, B Venkatesham, 2024-07-16 This unique compendium stresses on physical concepts and the applications to practical problems The authors decades of experience in teaching research and industrial consultancy are reflected in the choice of the solved examples and unsolved problems The second edition has three additional chapters containing topics of vibration and acoustic sensors and instruments finite element method FEM boundary element method BEM and statistical energy analysis SEA etc thus enabling students to solve real life problems in industrial and automotive noise control The useful reference text targets senior undergraduate mechanical and environmental engineering students as well as designers of industrial machinery and layouts The book can readily be used for self study by practicing designers and engineers Mathematical derivations are avoided and illustrations tables and empirical formulae are included for ready reference
