Chapter Six PROGRAMMING LANGUAGES

Chapter Summary

This chapter begins with a short history of programming languages. It presents the classification of languages by generations and also points out that such a linear classification scheme fails to capture the true diversity of languages today. To support this claim, the chapter introduces the declarative, functional, and object-oriented paradigms as alternatives to the more traditional imperative approach. There are separate sections later in the chapter on both the object-oriented and declarative paradigms.

The chapter also presents some common structures found in third-generation imperative and object-oriented languages, drawing examples from Ada, C, C++, COBOL, FORTRAN, and Java. Topics covered include declaration statements, control statements, functions, and parameter passing. An additional section extends this study to include topics associated with object-oriented languages.

To bridge the gap between high-level languages and machine language, this chapter discusses the rudiments of language translation, including the basic steps of lexical analysis, parsing, and code generation.

Optional sections introduce parallel programming, and explore declarative programming via logic programming and the language Prolog.

Comments

1. This chapter is intended to serve one of two roles, depending on the programming background of the audience. For those with previous programming experience, the chapter can be approached as an introduction to the subject of language design and implementation. For those with no programming experience, the chapter can serve as a generic introduction to programming languages or a context in which a particular language can be emphasized.

An Introduction to Computational Biochemistry C. Stan Tsai, 2003-03-31 This comprehensive text offers a solid introduction to the biochemical principles and skills required for any researcher applying computational tools to practical problems in biochemistry Each chapter includes an introduction to the topic a review of the biological concepts involved a discussion of the programming and applications used key references and problem sets and answers Providing detailed coverage of biochemical structures enzyme reactions metabolic simulation genomic and proteomic analyses and molecular modeling this is the perfect resource for students and researchers in biochemistry bioinformatics bioengineering and computational science

Computer Science J. Glenn Brookshear, 1994 Now in its eighth edition this book continues to provide a comprehensive accessible and up to date introduction to the dynamic field of computer science using a breadth first approach The table of contents and the text itself have been revised and expanded to reflect changes in the field including the trend toward using Web and Internet Technology the evolution of Objects and the important growth in the field of databases Specifically chapter three from the previous edition has been expanded into two chapters Chapter three will now only cover Operating Systems and the new chapter four will focus on Networks and the Internet Anyone interested in gaining a thorough introduction to Computer Science

Applied Computer Science for GGOS Observatories Alexander N.J. Neidhardt, 2017-08-08 This book combines elementary theory from computer science with real world challenges in global geodetic observation based on examples from the Geodetic Observatory Wettzell Germany It starts with a step by step introduction to developing stable and safe scientific software to run successful software projects The use of software toolboxes is another essential aspect that leads to the application of generative programming An example is a generative network middleware that simplifies communication One of the book's main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques The complete software design of a satellite laser ranging system is taken as an example Such automated systems are then combined for global interaction using secure communication tunnels for remote access The network of radio telescopes is used as a reference Combined observatories form coordinated multi agent systems and offer solutions for operational aspects of the Global Geodetic Observing System GGOS with regard to Industry 4.0
