Laboratory Unit Operations and Experimental Methods in Chemical Engineering Omar M. Basha, Badie I. Morsi, 2018-10-10 This book covers a wide variety of topics related to the application of experimental methods in addition to the pedagogy of chemical engineering laboratory unit operations The purpose of this book is to create a platform for the exchange of different experimental techniques approaches and lessons in addition to new ideas and strategies in teaching laboratory unit operations to undergraduate chemical engineering students It is recommended for instructors and students of chemical engineering and natural sciences who are interested in reading about different experimental setups and techniques covering a wide range of scales which can be widely applied to many areas of chemical engineering interest **Discrete Element Method for Multiphase Flows with Biogenic Particles** Ling Zhou, Mahmoud A. Elemam, Ramesh K.

Agarwal, Weidong Shi, 2024-09-24 This book presents the advanced theory and application of the combined Computational Fluid Dynamics Discrete Element Method CFD DEM to multiphase flow simulations of the gas and bio particulate matter of non uniformly shaped biomass It explores how DEM can simulate the complex behaviour of biomass particles such as their packing in the multiphase flows that occurs in the agricultural product processing industries It offers an overview of aerodynamic systems such as cyclone separators used in the agricultural processing industry A detailed description of DEM modeling including the particle particle particle boundary and particle fluid interactions in the context of biomass particles of varying sizes and shapes is provided Coverage includes the critical application of CFD DEM simulation technology in designing and optimizing grain handling and processing equipment and the application of extended DEM to other granular

flows of complex particles like sand powders and dust from mines where clumping and agglomeration occur The application of DEM in modeling and simulation of complex multiphase systems can help improve productivity reduce costs and increase efficiency in the agricultural industry *Continuous Casting* Michael Vynnycky,2019-07-30 Continuous casting is an industrial process whereby molten metal is solidified into a semi finished billet bloom or slab for subsequent rolling in finishing mills it is the most frequently used process to cast not only steel but also aluminium and copper alloys Since its widespread introduction for steel in the 1950s it has evolved to achieve improved yield quality productivity and cost efficiency It allows lower cost production of metal sections with better quality due to the inherently lower costs of continuous standardized production of a product as well as providing increased control over the process through automation Nevertheless challenges remain and new ones appear as ways are sought to minimize casting defects and to cast alloys that could originally only be cast via other means This Special Issue of the journal Metals consists of 14 research articles that cover many aspects of experimental work and theoretical modelling related to the ongoing development of continuous casting processes *Computational & Experimental Methods in Multiphase & Complex Flow* X S. Hernández,P. Vorobieff,2019-07-23 Composed of papers presented at the 10th conference on Multiphase flow this book presents the latest research on the subject The research included in this volume focuses on using synergies between experimental and computational techniques to gain a better understanding of all classes of multiphase and complex flow **Sustainable Energy Systems Planning, Integration and Management** Kim Guldstrand Larsen,2020-01-21 Energy systems worldwide are undergoing major transformation as a consequence of the transition towards the widespread use of clean and sustainable energy sources Basically this involves massive changes in technical and organizational levels together with tremendous technological upgrades in different sectors ranging from energy generation and transmission systems down to distribution systems These actions generate huge science and engineering challenges and demands for expert knowledge in the field to create solutions for a sustainable energy system that is economically environmentally and socially viable while meeting high security requirements This book covers these promising and dynamic areas of research and development and presents contributions in sustainable energy systems planning integration and management Moreover the book elaborates on a variety of topics ranging from design and planning of small to large scale energy systems to the operation and control of energy networks in different sectors namely electricity heat and transport *Progress in Exergy, Energy, and the Environment* Ibrahim Dincer,Adnan Midilli,Haydar Kucuk,2014-06-17 This thorough and highly relevant volume examines exergy energy and the environment in the context of energy systems and applications and as a potential tool for design analysis optimization It further considers their role in minimizing and or eliminating environmental impacts and providing for sustainable development In this regard several key topics ranging from the basics of the thermodynamic concepts to advanced exergy analysis techniques in a wide range of applications are covered Advances in Mechanics of Materials M. Naushad

Alam, Arshad H. Khan, Mohammad Talha, 2025-09-02 This book presents select peer reviewed papers from the First International Conference on Mechanical Engineering ICMEI3 2024 It covers recent research on various topics such as mechanics of functional materials and smart structures composite and sandwich materials impact mechanics fracture and damage in different materials mechanics of advanced and soft materials material characterization solid fluid Interaction tribology condition monitoring and many others It is a valuable reference for academics researchers and civil and mechanical engineers working in areas of structural and material engineering and mechanics *Advances and Trends in Engineering Sciences and Technologies III* Mohamad Ali, Peter Platko, 2019-03-25 These are the proceedings of the 3rd International Conference on Engineering Sciences and Technologies ESaT 2018 held from 12th 14th September 2018 in the High Tatras Mountains Tatransk Matliare Slovak Republic ESaT 2018 was organized under the auspices of the Faculty of Civil Engineering Technical University of Košice Slovak Republic in collaboration with Peter the Great St Petersburg Polytechnic University Russia after the successful organization with excellent feedback of the previous international conferences ESaT 2015 and ESaT 2016 The proceedings is covering various topics and disciplines in civil engineering sciences such as Buildings and Architectural Engineering Bearing Structures Material and Environmental Engineering Construction Technology and Management Building Physics and Facilities Geodesy Surveying and Mapping Geotechnics and Traffic Engineering The proceedings report on new and original progress and trends in various fields of engineering sciences that will be of interest to a wide range of academics and professionals from university and industry 116 papers originating from more than 10 countries have been accepted for publication in the conference proceedings Each accepted paper was reviewed by two reviewers selected according to the scientific area and orientation of the paper which guarantees topicality quality and an advanced level of the presented results **Recent Advances in Urban Ventilation Assessment and Flow**

Modelling Riccardo Buccolieri, Jian Hang, 2019-04-23 This book contains twenty one original papers and one review paper published by internationally recognized experts in the Atmosphere Special Issue Recent Advances in Urban Ventilation Assessment and Flow Modelling years 2017 2019 The Special Issue includes contributions on recent experimental and modelling works techniques and developments mainly tailored to the assessment of urban ventilation on flow and pollutant dispersion in cities The study of ventilation is of critical importance as it addresses the capacity with which a built urban structure is capable of replacing the polluted air with ambient fresh air Here ventilation is recognized as a transport process that improves local microclimate and air quality and closely relates to the term breathability The efficiency with which street canyon ventilation occurs depends on the complex interaction between the atmospheric boundary layer flow and the local urban morphology The individual contributions to this Issue are summarized and categorized into four broad topics 1 outdoor ventilation efficiency and application development of ventilation indices 2 relationship between indoor and outdoor ventilation 3 effects of urban morphology and obstacles to ventilation and 4 ventilation modelling in realistic urban districts

The results and approaches presented and proposed will be of great interest to experimentalists and modelers and may constitute a starting point for the improvement of numerical simulations of flow and pollutant dispersion in the urban environment for the development of simulation tools and for the implementation of mitigation strategies
