Discrete Element Method for Multiphase Flows with Biogenic Particles Ling Zhou,Mahmoud A. Elemam,Ramesh K. Agarwal,Weidong Shi,2024-09-24 This book presents the advanced theory and application of the combined Computational Fluid Dynamics Discrete Element Method CFD DEM to multiphase flow simulations of the gas and bio particulate matter of non uniformly shaped biomass It explores how DEM can simulate the complex behaviour of biomass particles such as their packing in the multiphase flows that occurs in the agricultural product processing industries It offers an overview of aerodynamic systems such as cyclone separators used in the agricultural processing industry A detailed description of DEM modeling including the particle particle particle boundary and particle fluid interactions in the context of biomass particles of varying sizes and shapes is provided Coverage includes the critical application of CFD DEM simulation technology in designing and optimizing grain handling and processing equipment and the application of extended DEM to other granular flows of complex particles like sand powders and dust from mines where clumping and agglomeration occur The application of DEM in modeling and simulation of complex multiphase systems can help improve productivity reduce costs and increase efficiency in the agricultural industry

Numerical and experimental investigations of distribution of gaseous emissions with the air flow in the indoor environment Umer Afzal,2017 There are many sources of emissions produced by burning fuel for power or heat through chemical reactions and from leaks from industrial processes or equipment There is always a possibility of a potential hazard when these gases enter into the indoor environment with the air flow The determination of the concentration profiles are necessary to evaluate the potential hazard posed by the gas spread The main objectives of this work are to develop an appropriate measurement methodology and a 3D CFD transient multicomponent simulation model for the determination of spatial and temporal distribution of gaseous emissions with the air flow in the indoor environment This work is also aimed at comparing the numerical simulation results of different CFD programs for a 2D base case model of

indoor air flow with and without emission source under laminar and turbulent flow conditions for the purpose of developing a better basic understanding of the physical phenomena and for the selection of the suitable and appropriate CFD program for the further development of the simulation model One of the goals is also to apply the developed simulation model to the loss prevention and risk mitigation in the indoor environment and to study the influence of different parameters on the concentration distribution of gaseous pollutants in the presence of air flow in the indoor environment to minimize the expensive and time consuming experimentation efforts
