COMBUSTION AREA AND VENT SYSTEM

Visually inspect the combustion area and vent system before each heating season. Make sure that all PVC pipes leading into the combustion area and vent are free from any cracks and sags. Also check the combustion air intake and vent pipes on the outside of your home for blockage.

When dirt, soot or rust is allowed to build up, your furnace can suffer a loss of efficiency and perform improperly. Accumulations on the main burners can result in their firing out of normal sequence. This delayed ignition will create an alarmingly loud sound.

⚠ CAUTION: If your furnace makes an especially loud noise when the main burners light, shut down your furnace and call your dealer.

To inspect the combustion area and vent system, you will need a flashlight. Refer to Figure 3 or 4, and proceed as follows:

1. Turn OFF the electrical supply to your furnace and remove the access doors. (See Figures 10 and 11 or 12.)
2. Remove burner enclosure front. (See Figure 31 or 32.)

Inspect the gas burners for dirt, rust, or scale. (See Figure 33.) Then inspect the vent outlet area and vent pipe.

⚠ CAUTION: If dirt, rust, soot, or scale accumulations are found, call your dealer.
Do not operate your furnace.

31

A87387

32

A88027

33

A880471

34

A81055

3. Inspect the vent pipe for sag, holes, cracks, or disconnection.

⚠ DANGER: If holes are found in the vent pipe, or if it has become disconnected, toxic fumes can escape into your home. **DO NOT OPERATE YOUR FURNACE.** Call your dealer for service.

4. Reinstall the burner enclosure front.
5. If your furnace is free of the above conditions, replace the access door and restore electrical power to your furnace. (See Figure 14 or 15, and 16.)
6. Start your furnace and observe its operation. Watch the burner flames to see if they are bright blue. (See Figure 34.) If you observe a suspected malfunction, or that the burner flames are not bright blue, call your dealer.
7. If your furnace is operating properly, reinstall the control access door.

HEADING SOUTH FOR THE WINTER?

DON'T FORGET YOUR FURNACE

Since the furnace uses a condensing heat exchanger, some water will accumulate in the unit as a result of the heat transfer process. Therefore, once it has been operated, it cannot be turned off and left off for an extended period of time when temperatures will reach 32°F or lower, unless winterized. Follow these procedures to winterize your furnace:

1. Mix a solution of equal amounts of ethylene glycol (Pres-tene II antifreeze coolant or equivalent) and water.
2. Turn OFF electrical supply to furnace. (See Figure 10.)
3. Remove control access door. (See Figure 11 or 12.)
4. Disconnect drain tube from bottom of inducer vent outlet. (See Figure 35 or 36.)

35

A88028

36

A87388

5. Insert funnel in drain tube and pour antifreeze/water solution into furnace until it is visible at point where condensate enters open drain. (See Figure 37.)
