ADS Software Bundles provide circuit and component designers with a choice of value-packed, pre-configured combinations of software modules built for specific design workflows. These combinations start with the powerful core ADS functionality for 3D physical layout and verification, data display, optimization, Python scripting automation and statistical analysis.

Additional simulation capabilities such as nonlinear circuit, electromagnetic (EM), electrothermal (ETH) and system are judiciously selected to create preconfigured EDA software bundles for RF/MW/mmW, High Speed Digital (HSD), Power electronics (PE) and Quantum electronics design.

ADS bundles are comprised of the W3600B ADS Core + EM Design (EMPro) Core environment and add separate ADS Simulation Elements, each of which provide specific design and simulation capabilities.

Simulation elements are themselves comprised of one or more separate modules, which add additional modeling and verification functions. These modules and elements, when purchased separately, are less cost efficient as the preconfigured ADS bundles.
