Sequin,R. Texhammar,2012-12-06 During their 20 years of activity members of the Association for the Study of Internal Fixation AO

ASIF have made authoritative contributions to the development of internal and external fixation. The close collaboration of surgeons, basic researchers, metallurgists, engineers, and the establishment of clinical documentation has made it possible to achieve a solid scientific basis for internal fixation. Clear definitions for the standardization of different types of osteosynthesis were possible: interfragmentary compression, splintage, and buttressing, as well as combinations of these three techniques. At the same time, a scientific and workmanlike instrumentation was developed. The idea was to keep diversification within limits but, however, to assemble a comprehensive collection of implants and instruments to answer all the problems presented by the complexity of bone operations. Osteosynthesis is a difficult and demanding operative method. Its claims on the surgeon and the theatre staff are high. Therefore, plans have existed for a long time to supplement the Manual of Internal Fixation with a detailed description of the AO Instrumentation, its use, and maintenance. Our collaborator, FRIDOLIN SEQUIN, graduate engineer, has accomplished this task with expert knowledge. He has organized over many years courses for theatre nurses and has been able from the resulting experience to provide helpful suggestions. When RIGMOR TEXHAMMAR, RN, joined AO International four years ago, it was natural to include her as a co-author.

Practical Manual for Musculoskeletal Trauma Kwok-Siu Leung, Put-Shui Ko, 2001-05-01. This book provides the practical guidelines and current trends in managing musculoskeletal trauma for first-line surgeons, serving as a comprehensive and precise quick reference in daily clinical practice. The first volume contains the practical protocols for clinical management, while the second contains the detailed descriptions of common operations in musculoskeletal trauma. The presentations are in the form of flow charts and illustrations, which ensures easy and quick cross-reference, particularly in emergency situations. All the authors are experienced surgeons in trauma care and actively involved in acute day-to-day clinical management of musculoskeletal injuries; even the illustrations have been drawn by surgeons.
