Ancient Wyoming Worlds Geology Bighorn:

Ancient Wyoming Kirk Johnson, Will Clyde, 2016-05-17 Sponsored by a grant from the National Science Foundation to the Denver Museum of Natural History Ever wondered what the ground below you was like millions of years ago Merging paleontology geology and artistry *Ancient Wyoming* illustrates scenes from the distant past and provides fascinating details on the flora and fauna of the past 300 million years The book provides a unique look at Wyoming both as it is today and as it was throughout ancient history at times a vast ocean a lush rain forest and a mountain prairie *Runaway Climate* Steven Earle, 2024-04-30 With tipping points and extreme global warming looming the key to understanding our climate future lies in our distant past If you care at all about our future you must read *Runaway Climate* Richard Heinberg Senior Fellow Post Carbon Institute With rising emissions we are on track to cause rapid global warming with devastating consequences But how bad could climate change get and what might it do to planet Earth and humanity Fifty six million years ago our planet experienced a period of intense warming known as the Paleocene Eocene Thermal Maximum PETM resulting in a rapid global temperature increase of about 7 C Triggered by natural geological processes over millennia and magnified by strong climate feedback loops the PETM lasted for about 180 000 years and drastically altered life on Earth Yet in only a few short decades we've pumped similar amounts of greenhouse gases into the atmosphere making the PETM an unsettlingly apt analogy for our current predicament This deeply cautionary tale explores the runaway feedbacks that pushed the PETM's climate past the tipping point Subsequent cascades of environmental devastation from plant and animal migrations to ocean acidification extreme weather and mass extinctions A sobering vision of life on hothouse Earth a hostile world of desertification sea level rise climate refugees and agricultural collapse The urgent need for decisive individual and collective actions to slash carbon emissions stabilize the climate and undertake a rapid transition to a cleaner and healthier future Scientifically rigorous yet accessible to a wide audience *Runaway Climate* is essential reading for every one committed to understanding and taking action on the climate emergency *Cambrian Ocean World* John Foster, 2014-06-06 A comprehensive guide to the evolution of life during the Cambrian Period and a story of one man's search for the world's oldest animal fossils Told with a wry humor the odd pop cultural sci fi reference and personal anecdotes Foster does a great job in making this an enjoyable read and bringing the Cambrian to us An alien world is transformed before our eyes into one that is increasingly more familiar *Quarterly Review of Biology* This volume aimed at the general reader presents the life and times of the amazing animals that inhabited Earth more than five hundred million years ago The Cambrian Period was a critical time in Earth's history During this immense span of time nearly every modern group of animals appeared Although life had been around for more than two billion millennia Cambrian rocks preserve the record of the first appearance of complex animals with eyes protective skeletons antennae and complex ecologies Grazing predation and multi-tiered ecosystems with animals living in on or above the sea floor became common The cascade of interaction led to an ever

increasing diversification of animal body types By the end of the period the ancestors of sponges corals jellyfish worms mollusks brachiopods arthropods echinoderms and vertebrates were all in place The evidence of this Cambrian explosion is preserved in rocks all over the world including North America where the seemingly strange animals of the period are preserved in exquisite detail in deposits such as the Burgess Shale in British Columbia Cambrian Ocean World tells the story of what is for us the most important period in our planet s long history Definitely the best introductory textbook within its field It is clearly worth reading Deposits Magazine

Wyoming's Dinosaur Discoveries The Big Horn Basin Foundation,2015-11-02 Wyoming is home to some of the world s most famous dinosaurs As early as 1872 dinosaurs were excavated placed on railcars and shipped east For the past 140 years paleontologists have scoured Wyoming to excavate tens of thousands of dinosaur bones now displayed internationally It was not until 1961 that a dinosaur from Wyoming was mounted and placed on display at the University of Wyoming s Geological Museum in Laramie Mining and Engineering World ,1906 Bulletin ,1932

The Heart Mountain Detachment Fault: A Critical Reappraisal Albert J. Warner,Thomas M. Bown,2025-02-10 The Heart Mountain Detachment Fault HMDF is an immense geologic structure in northwest Wyoming that as defined prior to this study extends from just inside the northeast entrance of Yellowstone National Park to areas southwest and northeast of Cody WY This enigmatic structure has puzzled geologists for more than 100 years The consensus is that a massive slab of limestones and dolomites 320 485 million years old broke away from an outcrop near Silver Gate MT about 49 million years ago and slid nearly 75 miles to the southeast at speeds of nearly 100 mph to more than 700 mph and broke up into several giant blocks up to five miles in diameter Heart Mountain north of Cody WY the namesake for this displacement is where some of its geologic relationships were first recognized over 125 years ago Our research demonstrates that all of the geologic features attributed to the single event HMDF are instead the result of two geologic events separated in time by more than 47 million years The first we term the Shoshone Sunlight Abiathar Detachment Fault SSADF that occurred 49 5 million years ago and the second we call the Heart Mountain McCullough Peaks Sturzstrom HMMPS that occurred 2 08 million years ago A sturzstrom is a huge landslide that travels a great horizontal distance Both massive displacements were instigated by violent tectonic processes The SSADF was triggered by a powerful megathrust earthquake initiated by plate tectonic movements and followed by extensive volcanism whereas the HMMPS was caused by a gigantic super eruption of a volcano in what is present day Yellowstone National Park
