Digital VLSI Systems Design Seetharaman Ramachandran, 2007-06-14 This book deals with actual design applications rather than the technology of VLSI Systems This book is written basically for an advanced level course in Digital VLSI Systems Design using a Hardware Design Language HDL Verilog This book may be used for teaching undergraduates graduates and research scholars of Electrical Electronics Computer Science and Engineering Embedded Systems Measurements and Instrumentation Applied Electronics and interdisciplinary departments such as Biomedical Mechanical Engineering Information Technology Physics etc This book also serves as a reference design manual for practicing engineers and researchers Although this book is written for an advanced level course diligent freelance readers and consultants especially those who do not have a first level exposure of digital logic design may also start using this book after a short term course or self study on digital logic design In order to help these readers as well as regular students the book starts with a good review of digital systems design which lays a solid foundation to understand the rest of this book right up to involved Project Designs unfolded gradually Contents of the Book The book presents new source material and theory as well as synthesis of recent work with complete Project Designs using industry standard CAD tools and FPGA boards enabling the serious readers to design VLSI Systems on their own

Fundamentals and Standards in Hardware Description Languages Jean Mermet, 2012-12-06 The second half of this century will remain as the era of proliferation of electronic computers They did exist before but they were mechanical During next century they may perform other mutations to become optical or molecular or even biological Actually all these aspects are only fancy dresses put on mathematical machines This was always recognized to be true in the domain of software where machine or high level languages are more or less rigorous but immaterial variations of the universally accepted mathematical language aimed at specifying elementary operations functions algorithms and processes But even a mathematical machine needs a physical support and this is what hardware is all about The invention of hardware description languages HDLs in the early 60s was an attempt to stay longer at an abstract level in the design process and to push the stage of physical implementation up to the moment when no more technology independent decisions can be taken It was also an answer to the continuous exponential growth of complexity of systems to

be designed This problem is common to hardware and software and may explain why the syntax of hardware description languages has followed with a reasonable delay of ten years the evolution of the programming languages at the end of the 60s they were Algol like a decade later Pascal like and now they are C or ADA like They have also integrated the new concepts of advanced software specification languages

Mixed Design of Integrated Circuits and Systems Andrzej Napieralski,Zygmunt Ciota,Augustin Martinez,Gilbert De Mey,Joan Cabestany,2012-12-06 Very fast advances in IC technologies have brought new challenges into the physical design of integrated systems The emphasis on system performance in lately developed applications requires timing and power constraints to be considered at each stage of physical design The size of ICs is decreasing continuously and the density of power dissipated in the circuits is growing rapidly The first challenge is the Information Technology where new materials devices telecommunication and multimedia facilities are developed The second one is the Biomedical Science and Biotechnology The utilisation of bloodless surgery is possible now because of wide micro sensors and micro actuators application Nowadays the modern micro systems can be implanted directly into the human body and the medicine can be applied right in the proper time and place in the patient body The low power devices are being developed particularly for medical and space applications This has created for designers in all scientific domains new possibilities which must be handed down to the future generations of designers In this spirit we organised the Fourth International Workshop MIXED DESIGN OF INTEGRATED CIRCUITS AND SYSTEMS in order to provide an international forum for discussion and the exchange of information on education teaching experiences training and technology transfer in the area of microelectronics and microsystems
