Bayesian Applications in Pharmaceutical Development Mani Lakshminarayanan, Fanni Natanegara, 2019-11-07 The cost for bringing new medicine from discovery to market has nearly doubled in the last decade and has now reached 2.6 billion. There is an urgent need to make drug development less time consuming and less costly. Innovative trial designs and analyses such as the Bayesian approach are essential to meet this need. This book will be the first to provide comprehensive coverage of Bayesian applications across the span of drug development from discovery to clinical trial to manufacturing with practical examples. This book will have a wide appeal to statisticians, scientists, and physicians working in drug development who are motivated to accelerate and streamline the drug development process as well as students who aspire to work in this field. The advantages of this book are: Provides motivating worked practical case examples with easy to grasp models, technical details, and computational codes to run the analyses; Balances practical examples with best practices on trial simulation and reporting as well as regulatory perspectives; Chapters written by authors who are individual contributors in their respective topics. Dr. Mani Lakshminarayanan is a researcher and statistical consultant with more than 30 years of experience in the pharmaceutical industry. He has published over 50 articles, technical reports, and book chapters besides serving as a referee for several journals. He has a PhD in Statistics from Southern Methodist University, Dallas, Texas, and is a Fellow of the American Statistical Association. Dr. Fanni Natanegara has over 15 years of pharmaceutical experience and is currently Principal Research Scientist and Group Leader for the Early Phase Neuroscience Statistics team at Eli Lilly and Company. She played a key role in the Advanced Analytics team to provide Bayesian education and statistical consultation at Eli Lilly. Dr. Natanegara is the chair of the cross-industry regulatory academic DIA BSWG to ensure that Bayesian methods are appropriately utilized for design and analysis throughout the drug development process.
