Applications Of Orlicz Spaces Pure And Applied Mathematics:

Applications Of Orlicz Spaces M.M. Rao,Z.D. Ren,2002-02-08 Presents previously unpublished material on the fundamental principles and properties of Orlicz sequence and function spaces Examines the sample path behavior of stochastic processes Provides practical applications in statistics and probability **Optimization, Control, and Applications in the Information Age** Athanasios Migdalas,Athanasia Karakitsiou,2015-07-30 Recent developments in theory algorithms and applications in optimization and control are discussed in this proceedings based on selected talks from the Optimization Control and Applications in the Information Age conference organized in honor of Panos Pardalos s 60th birthday This volume contains numerous applications to optimal decision making in energy production and fuel management data mining logistics supply chain management market network analysis risk analysis and community network analysis In addition a short biography is included describing Dr Pardalos s path from a shepherd village on the high mountains of Thessaly to academic success Due to the wide range of topics such as global optimization combinatorial optimization game theory stochastic programming contained in this publication scientists researchers and students in optimization operations research analytics mathematics and computer science will be interested in this volume *Optimization in Function Spaces with Stability Considerations in Orlicz Spaces* Peter Kosmol,Dieter Müller-Wichards,2011 This is an essentially self contained book on the theory of convex functions and convex optimization in Banach spaces with a special interest in Orlicz spaces Approximate algorithms based on the stability principles and the solution of the corresponding nonlinear equations are developed in this text A synopsis of the geometry of Banach spaces aspects of stability and the duality of different levels of differentiability and convexity is developed A particular emphasis is placed on the geometrical aspects of strong solvability of a convex optimization problem it turns out that this property is equivalent to local uniform convexity of the corresponding convex function This treatise also provides a novel approach to the fundamental theorems of Variational Calculus based on the principle of pointwise minimization of the Lagrangian on the one hand and convexification by quadratic supplements using the classical Legendre Ricatti equation on the other The reader should be familiar with the concepts of mathematical analysis and linear algebra Some awareness of the principles of measure theory will turn out to be helpful The book is suitable for students of the second half of undergraduate studies and it provides a rich set of material for a master course on linear and nonlinear functional analysis Additionally it offers novel aspects at the advanced level From the contents Approximation and Polya Algorithms in Orlicz Spaces Convex Sets and Convex Functions Numerical Treatment of Non linear Equations and Optimization Problems Stability and Two stage Optimization Problems Orlicz Spaces Orlicz Norm and Duality Differentiability and Convexity in Orlicz Spaces Variational Calculus **Metric Modular Spaces** Vyacheslav Chistyakov,2015-12-14 Aimed toward researchers and graduate students familiar with elements of functional analysis linear algebra and general topology this book contains a general study of modulars modular spaces and metric modular spaces

Modulars may be thought of as generalized velocity fields and serve two important purposes generate metric spaces in a unified manner and provide a weaker convergence the modular convergence whose topology is non metrizable in general Metric modular spaces are extensions of metric spaces metric linear spaces and classical modular linear spaces The topics covered include the classification of modulars metrizability of modular spaces modular transforms and duality between modular spaces metric and modular topologies Applications illustrated in this book include the description of superposition operators acting in modular spaces the existence of regular selections of set valued mappings new interpretations of spaces of Lipschitzian and absolutely continuous mappings the existence of solutions to ordinary differential equations in Banach spaces with rapidly varying right hand sides

Regularity Theory for Generalized Navier-Stokes Equations Cholmin Sin, Evgenii S. Baranovskii, 2025-03-17 This book delves into the recent findings and research methods in the existence and regularity theory for Non Newtonian Fluids with Variable Power Law The aim of this book is not only to introduce recent results and research methods in the existence and regularity theory such as higher integrability higher differentiability and Holder continuity for flows of non Newtonian fluids with variable power laws but also to summarize much of the existing literature concerning these topics While this book mainly focuses on steady state flows of non Newtonian fluids the methods and ideas presented in this book can be applied to unsteady flows as discussed in Chapter 7 and other related problems such as complex non Newtonian fluids plasticity elasticity $p \times$ Laplacian type systems and so on The book is intended for researchers and graduate students in the field of mathematical fluid mechanics and partial differential equations with variable exponents It is expected to contribute to the advancement of mathematics and its applications

Harmonic Analysis and Partial Differential Equations Justin Feuto, Bérenger Akon Kpata, 2024-09-12 This proceedings volume collects selected papers presented at the Harmonic Analysis and Applications Workshop held in Abidjan C te d Ivoire from May 22 26 2023 Chapters present surveys and recent research results from experts and cover a range of topics at the intersections of classical and abstract harmonic analysis PDEs and numerical analysis

Banach Spaces and their Applications in Analysis Beata Randrianantoanina, Narcisse Randrianantoanina, 2011-12-22 In recent years there has been a surge of profound new developments in various aspects of analysis whose connecting thread is the use of Banach space methods Indeed many problems seemingly far from the classical geometry of Banach spaces have been solved using Banach space techniques This volume contains papers by participants of the conference Banach Spaces and their Applications in Analysis held in May 2006 at Miami University in Oxford Ohio in honor of Nigel Kalton s 60th birthday In addition to research articles contributed by participants the volume includes invited expository articles by principal speakers of the conference who are leaders in their areas These articles present overviews of new developments in each of the conference s main areas of emphasis namely nonlinear theory isomorphic theory of Banach spaces including connections with combinatorics and set theory algebraic and homological methods in Banach spaces approximation theory and algorithms in Banach spaces This

volume also contains an expository article about the deep and broad mathematical work of Nigel Kalton written by his long time collaborator Gilles Godefroy Godefroy's article and in fact the entire volume illustrates the power and versatility of applications of Banach space methods and underlying connections between seemingly distant areas of analysis *Stochastic Partial Differential Equations and Related Fields* Andreas Eberle, Martin Grothaus, Walter Hoh, Moritz Kassmann, Wilhelm Stannat, Gerald Trutnau, 2018-07-03 This Festschrift contains five research surveys and thirty four shorter contributions by participants of the conference Stochastic Partial Differential Equations and Related Fields hosted by the Faculty of Mathematics at Bielefeld University October 10-14 2016 The conference attended by more than 140 participants including PostDocs and PhD students was held both to honor Michael Röckner's contributions to the field on the occasion of his 60th birthday and to bring together leading scientists and young researchers to present the current state of the art and promising future developments Each article introduces a well described field related to Stochastic Partial Differential Equations and Stochastic Analysis in general In particular the longer surveys focus on Dirichlet forms and Potential theory the analysis of Kolmogorov operators Fokker Planck equations in Hilbert spaces the theory of variational solutions to stochastic partial differential equations singular stochastic partial differential equations and their applications in mathematical physics as well as on the theory of regularity structures and paracontrolled distributions The numerous research surveys make the volume especially useful for graduate students and researchers who wish to start work in the above mentioned areas or who want to be informed about the current state of the art **Orlicz Spaces and Generalized Orlicz Spaces** Petteri Harjulehto, Peter Hästö, 2019-05-07 This book presents a systematic treatment of generalized Orlicz spaces also known as Musielak Orlicz spaces with minimal assumptions on the generating function It introduces and develops a technique centered on the use of equivalent functions Results from classical functional analysis are presented in detail and new material is included on harmonic analysis Extrapolation is used to prove for example the boundedness of Calderón Zygmund operators Finally central results are provided for Sobolev spaces including Poincaré and Sobolev Poincaré inequalities in norm and modular forms Primarily aimed at researchers and PhD students interested in Orlicz spaces or generalized Orlicz spaces this book can be used as a basis for advanced graduate courses in analysis **Operator Algebras, Toeplitz Operators and Related Topics** Wolfram Bauer, Roland Duduchava, Sergei Grudsky, Marinus A. Kaashoek, 2020-09-01 This book features a collection of up to date research papers that study various aspects of general operator algebra theory and concrete classes of operators including a range of applications Most of the papers included were presented at the International Workshop on Operator Algebras Toeplitz Operators and Related Topics in Boca del Río Veracruz Mexico in November 2018 The conference which was attended by more than 30 leading experts in the field was held in celebration of Nikolai Vasilevski's 70th birthday and the contributions are dedicated to him
