

APPLIED ALGEBRA AND FUNCTIONAL ANALYSIS

Anthony N. Michel and Charles J. Herget

"The treatment is thorough; the book will certainly serve as a valuable reference."
—*American Scientist*

Written for graduate and advanced undergraduate students in engineering and science, this book focuses primarily on set theory, algebra and analysis. Useful both for self-study and as a reference, the text provides the reader with appropriate mathematical background for advanced study in engineering or science, a basis for more advanced mathematical study and an overview of modern mathematics.

The book is essentially divided into three parts: set theory (Chapter 1), algebra (Chapters 2-4) and analysis (Chapters 5-7). The first two chapters deal with the fundamental concepts of sets, functions, relations and equivalence relations, and algebraic structures. Chapters 3 and 4 cover vector spaces and linear transformations, and finite-dimensional vector spaces and matrices. The last three chapters investigate metric spaces, normed spaces (Banach spaces) and inner product spaces (Hilbert spaces), and linear operators. A generous number of exercises have been integrated into the text and a section of references and notes is found at the end of each chapter.
