Algorithmic Number Theory: Efficient algorithms Eric Bach, Jeffrey Lagarias, Shallit, 1996 Volume 1 *Algorithmic Number Theory* Duncan Buell, 2004-05-04 The sixth Algorithmic Number Theory Symposium was held at the University of Vermont in Burlington from 13-18 June 2004. The organization was a joint effort of number theorists from around the world. There were four invited talks at ANTS VI by Dan Bernstein of the University of Illinois at Chicago, Kiran Kedlaya of MIT, Alice Silverberg of Ohio State University and Mark Watkins of Pennsylvania State University. Thirty contributed talks were presented and a poster session was held. This volume contains the written versions of the contributed talks and three of the four invited talks. Not included is the talk by Dan Bernstein. ANTS in Burlington is the sixth in a series that began with ANTS I in 1994 at Cornell University, Ithaca, New York, USA and continued at Université de Bordeaux, France 1996, Reed College, Portland, Oregon, USA 1998, the University of Leiden, Leiden, The Netherlands 2000 and the University of Sydney, Sydney, Australia 2002. The proceedings have been published as volumes 877, 1122, 1423, 1838 and 2369 of Springer-Verlag's Lecture Notes in Computer Science series. The organizers of the 2004 ANTS conference express their special gratitude and thanks to John Cannon and Joe Buhler for invaluable behind-the-scenes advice.

Fundamentals of Computation Theory Andrzej Lingas, Bengt J. Nilsson, 2003-07-29 This book constitutes the refereed proceedings of the 14th International Symposium Fundamentals of Computation Theory FCT 2003 held in Malmö, Sweden, in August 2003. The 36 revised full papers presented together with an invited paper and the abstracts of 2 invited talks were carefully reviewed and selected from 73 submissions. The papers are organized in topical sections on approximability, algorithms, networks and complexity, computational biology, computational geometry, computational models and complexity, structural complexity, formal languages and logic.

An Introduction to Mathematical Cryptography Jeffrey Hoffstein, Jill Pipher, J.H. Silverman, 2008-12-15 The creation of public key cryptography by Diffie and Hellman in 1976 and the subsequent invention of the RSA public key cryptosystem by Rivest Shamir and Adleman in 1978 are watershed events in the long history of secret communications It is hard to overestimate the importance of public key cryptosystems and their associated digital signature schemes in the modern world of computers and the Internet This book provides an introduction to the theory of public key cryptography and to the mathematical ideas underlying that theory Public key cryptography draws on many areas of mathematics including number theory abstract algebra probability and information theory Each of these topics is introduced and developed in sufficient detail so that this book provides a self contained course for the beginning student The only prerequisite is a first course in linear algebra On the other hand students with stronger mathematical backgrounds can move directly to cryptographic applications and still have time for advanced topics such as elliptic curve pairings and lattice reduction algorithms Among the many facets of modern cryptography this book chooses to concentrate primarily on public key cryptosystems and digital signature schemes This allows for an in depth

development of the necessary mathematics quired for both the construction of these schemes and an analysis of their security The reader who masters the material in this book will not only be well prepared for further study in cryptography but will have acquired a real understanding of the underlying mathematical principles on which modern cryptography is based
