A Variational Approach to Nonsmooth Dynamics Samir Adly, 2018-02-19 This brief examines mathematical models in nonsmooth mechanics and nonregular electrical circuits including evolution variational inequalities complementarity systems differential inclusions second order dynamics Lur e systems and Moreau's sweeping process The field of nonsmooth dynamics is of great interest to mathematicians mechanicians automatic controllers and engineers The present volume acknowledges this transversality and provides a multidisciplinary view as it outlines fundamental results in nonsmooth dynamics and explains how to use them to study various problems in engineering In particular the author explores the question of how to redefine the notion of dynamical systems in light of modern variational and nonsmooth analysis With the aim of bridging between the communities of applied mathematicians engineers and researchers in control theory and nonlinear systems this brief outlines both relevant mathematical proofs and models in unilateral mechanics and electronics

Task-Space Sensory Feedback Control of Robot Manipulators Chien Chern Cheah, Xiang Li, 2015-04-09 This book presents recent advances in robot control theory on task space sensory feedback control of robot manipulators By using sensory feedback information the robot control systems are robust to various uncertainties in modelling and calibration errors of the sensors Several sensory task space control methods that do not require exact knowledge of either kinematics or dynamics of robots are presented Some useful methods such as approximate Jacobian control adaptive Jacobian control region control and multiple task space regional feedback are included These formulations and methods give robots a high degree of flexibility in dealing with unforeseen changes and uncertainties in its kinematics and dynamics which is similar to human reaching movements and tool manipulation It also leads to the solution of several long standing problems and open issues in robot control such as force control with constraint uncertainty control of multi fingered robot hand with uncertain contact points singularity issue of

Jacobian matrix global task space control which are also presented in this book The target audience for this book includes scientists engineers and practitioners involved in the field of robot control theory **Explicit Stability Conditions for Continuous Systems** Michael I. Gil, 2005-03-17 Explicit Stability Conditions for Continuous Systems deals with non autonomous linear and nonlinear continuous finite dimensional systems Explicit conditions for the asymptotic absolute input to state and orbital stabilities are discussed This monograph provides new tools for specialists in control system theory and stability theory of ordinary differential equations with a special emphasis on the Aizerman problem A systematic exposition of the approach to stability analysis based on estimates for matrix valued functions is suggested and various classes of systems are investigated from a unified viewpoint *Adaptive Systems in Control and Signal Processing 1995 Cs.* Banyasz, 2014-05-23 Leading academic and industrial researchers working with adaptive systems and signal processing have been given the opportunity to exchange ideas concepts and solutions at the IFAC Symposia on Adaptive Systems in Control and Signal Processing This postprint volume contains all those papers which were presented at the 5th IFAC Symposium in Budapest in 1995 The technical program was composed of a number of invited and contributed sessions and a special case study session providing a good balance between applications and theory oriented papers
