Artificial Intelligence and the Future of Defense Stephan De Spiegeleire,Matthijs Maas,Tim Sweijs,2017-05-17 Artificial intelligence AI is on everybody s minds these days Most of the world s leading companies are making massive investments in it Governments are scrambling to catch up Every single one of us who uses Google Search or any of the new digital assistants on our smartphones has witnessed first hand how quickly these developments now go Many analysts foresee truly disruptive changes in education employment health knowledge generation mobility etc But what will AI mean for defense and security In a new study HCSS offers a unique perspective on this question Most studies to date quickly jump from AI to autonomous mostly weapon systems They anticipate future armed forces that mostly resemble today s armed forces engaging in fairly similar types of activities with a still primarily industrial kinetic capability bundle that would increasingly be AI augmented The authors of this study argue that AI may have a far more transformational impact on defense and security whereby new incarnations of armed force start doing different things in novel ways The report sketches a much broader option space within which defense and security organizations DSOs may wish to invest in successive generations of AI technologies It suggests that some of the most promising investment opportunities to start generating the sustainable security effects that our polities societies and economies expect may lie in in the realms of prevention and resilience Also in those areas any large scale application of AI will have to result from a preliminary open minded on all sides public debate on its legal ethical and privacy implications The authors submit however that such a debate would be more fruitful than the current heated discussions about killer drones or robots Finally the study suggests that the advent of artificial super intelligence i e AI that is superior across the board to human intelligence which many experts now put firmly within the longer term planning horizons of our DSOs presents us with unprecedented risks but also opportunities that we have to start to explore The report contains an overview of the role that intelligence the computational part of the ability to achieve goals in the world has

played in defense and security throughout human history a primer on AI what it is where it comes from and where it stands today in both civilian and military contexts a discussion of the broad option space for DSOs it opens up 12 illustrative use cases across that option space and a set of recommendations for especially small and medium sized defense and security organizations

Introduction to Algorithms for Data Mining and Machine Learning Xin-She Yang, 2019-06-19 Introduction to Algorithms for Data Mining and Machine Learning introduces the essential ideas behind all key algorithms and techniques for data mining and machine learning along with optimization techniques Its strong formal mathematical approach well selected examples and practical software recommendations help readers develop confidence in their data modeling skills so they can process and interpret data for classification clustering curve fitting and predictions Masterfully balancing theory and practice it is especially useful for those who need relevant well explained but not rigorous proofs based background theory and clear guidelines for working with big data

Applications of Computational Intelligence in Biology Tomasz G. Smolinski, Mariofanna G. Milanova, Aboul-Ella Hassanien, 2008-06-10 Computational Intelligence CI has been a tremendously active area of search for the past decade or so There are many successful applications of CI in many sub elds of biology including bioinformatics computational nomics protein structure prediction or neuronal systems modeling and an ysis However there still are many open problems in biology that are in d perate need of advanced and e cient computational methodologies to deal with tremendous amounts of data that those problems are plagued by fortunately biology researchers are very often unaware of

the abundance of computational techniques that they could put to use to help them analyze and understand the data underlying their research inquiries On the other hand computational intelligence practitioners are often unfamiliar with the particular problems that their new state of the art algorithms could be successfully applied for The separation between the two worlds is partially caused by the use of different languages in these two spheres of science but also by the relatively small number of publications devoted solely to the purpose of facilitating the exchange of new computational algorithms and methodologies on one hand and the needs of the biology realm on the other The purpose of this book is to provide a medium for such an exchange of expertise and concerns In order to achieve the goal we have solicited contributions from both computational intelligence as well as biology researchers
