Hopgood, 2011-12-12 The third edition of this bestseller examines the principles of artificial intelligence and their application to engineering and science as well as techniques for developing intelligent systems to solve practical problems Covering the full spectrum of intelligent systems techniques it incorporates knowledge based systems computational intelligence and their hybrids Using clear and concise language Intelligent Systems for Engineers and Scientists Third Edition features updates and improvements throughout all chapters It includes expanded and separated chapters on genetic algorithms and single candidate optimization techniques while the chapter on neural networks now covers spiking networks and a range of recurrent networks The book also provides extended coverage of fuzzy logic including type 2 and fuzzy control systems Example programs using rules and uncertainty are presented in an industry standard format so that you can run them yourself The first part of the book describes key techniques of artificial intelligence including rule based systems Bayesian updating certainty theory fuzzy logic types 1 and 2 frames objects agents symbolic learning case based reasoning genetic algorithms optimization algorithms neural networks hybrids and the Lisp and Prolog languages The second part describes a wide range of practical applications in interpretation and diagnosis design and selection planning and control The author provides sufficient detail to help you develop your own intelligent systems for real

applications Whether you are building intelligent systems or you simply want to know more about them this book provides you with detailed and up to date guidance Check out the significantly expanded set of free web based resources that support the book at <http://www.adrianhopgood.com/aitoolkit>

Advanced Intelligent Systems for Sustainable Development (AI2SD'2020) Janusz Kacprzyk, Valentina E. Balas, Mostafa Ezziyyani, 2022-02-07 This book publishes the best papers accepted and presented at the 3rd edition of the International Conference on Advanced Intelligent Systems for Sustainable Development Applied to Agriculture Energy Health Environment Industry Education Economy and Security AI2SD 2020 This conference is one of the biggest amalgamations of eminent researchers students and delegates from both academia and industry where the collaborators have an interactive access to emerging technology and approaches globally In this book readers find the latest ideas addressing technological issues relevant to all areas of the social and human sciences for sustainable development Due to the nature of the conference with its focus on innovative ideas and developments the book provides the ideal scientific and brings together very high quality chapters written by eminent researchers from different disciplines to discover the most recent developments in scientific research

Machine Learning Mohssen Mohammed, Muhammad Badruddin Khan, Eihab Bashier Mohammed Bashier, 2016-08-19 Machine learning one of the top emerging sciences has an extremely broad range of applications However many books on the subject provide only a theoretical approach making it difficult for a newcomer to grasp the subject material This book provides a more practical approach by explaining the concepts of machine learning algorithms and describing the areas of application for each algorithm using simple practical examples to demonstrate each algorithm and showing how different issues related to these algorithms are applied

GeoComputation, Second Edition Robert J. Abraham, Linda M. See, 2014-06-23 A revision of Openshaw and Abraham's seminal work GeoComputation Second Edition retains influences of its originators while also providing updated state of the art information on changes in the computational environment In keeping with the field's development this new edition takes a broader view and provides comprehensive coverage across the field of GeoComputation See What's New in the Second Edition Coverage of ubiquitous computing the GeoWeb reproducible research open access and agent based modelling Expanded chapter on Genetic Programming and a separate chapter developed on Evolutionary Algorithms Ten chapters updated by the same or new authors and eight new chapters added to reflect state of the art Each chapter is a stand alone entity that covers a particular topic You can simply dip in and out or read it from cover to cover The opening chapter by Stan Openshaw has been preserved with only a limited number of minor essential modifications having been enacted This is not just a matter of respect Openshaw's work is eloquent prophetic and his overall message remains largely unchanged In contrast to other books on this subject GeoComputation Second Edition supplies a state of the art review of all major areas in GeoComputation with chapters written especially for this book by invited specialists This approach helps develop and expand a computational culture one that can exploit the ever increasing richness of modern

geographical and geospatial datasets It also supplies an instructional guide to be kept within easy reach for regular access and when need arises

Advances in Intelligent Systems Research and Innovation Vassil Sgurev, Vladimir Jotsov, Janusz Kacprzyk, 2021-11-03 This book represents the experience of successful researchers from four continents on a broad range of intelligent systems and it hints how to avoid anticipated conflicts and problems during multidisciplinary innovative research from Industry 4.0 and/or Internet of Things through modern machine learning and software agent applications to open data science big data advance analytics visual analytics text mining web mining knowledge discovery deep data mining issues The considered intelligent part is essential in most smart control systems cyber security bioinformatics virtual reality robotics mathematical modelling projects and its significance rapidly increases in other technologies Theoretical foundations of fuzzy sets mathematical and non classical logic also are rapidly developing

Robust Intelligent Systems Alfons Schuster, 2008-08-06 Our time recognizes robustness as an important all pervading feature in the world around us Despite its omnipresence robustness is not entirely understood rather difficult to define and despite its obvious value in many situations rather difficult to achieve One of the goals of this edited book is to report on the topic of robustness from a variety and diverse range of fields and perspectives We are interested for instance in fundamental strategies nature applies to make systems robust and arguably intelligent and how these strategies may hold as general design principles in modern technology A particular focus is on computer based systems and applications This in mind the book has four main sections Part I has a look at robustness in terms of underlying technologies and infrastructures upon which many computer based intelligent systems reside and investigates robustness on the hardware and software level but also in larger environments such as the Internet and self managing systems The contributions in Part II target robustness in research areas that are inspired by biology including brain computer interfaces biological networks and biological immune systems for example Part III involves the exciting field of artificial intelligence The chapters here discuss the value of robustness as a general design principle for artificial intelligence stressing its potential in areas such as humanoid robotics and image processing
