Australia S Meteorite Craters A W R Bevan:

Australia's Meteorite Craters Kenneth McNamara, 2010-01-01 On Earth catastrophic impact of an asteroid or comet with truly global consequences has not happened during our written history and the threat seems very small Giant scars on our planet's surface are relics of an impact history stretching back more than 2 billion years and there is no assurance it cannot happen again In Australia there are 36 structures ranging from tens of metres to tens of kilometres in diameter and recognised to varying degrees of certainty as having been formed by giant meteorite impact In clear and concise language this book begins with ancient beliefs and myths about craters and then explains how they are actually formed and provides details of their structure Using the record in the rocks the authors also assess the likelihood of future impacts and their possible effects *The History of Meteoritics and Key Meteorite Collections* Gerald Joseph Home McCall, A. J.

Bowden, Richard John Howarth, 2006 This Special Publication has 24 papers with an international authorship and is prefaced by an introductory overview which presents highlights in the field The first section covers the acceptance by science of the reality of the falls of rock and metal from the sky an account that takes the reader from BCE before common era to the nineteenth century The second section details some of the world's most important collections in museums their origins and development The Smithsonian chapter also covers the astonishingly numerous finds in the cold desert of Antarctica by American search parties There are also contributions covering the finds by Japanese parties in the Yamato mountains and the equally remarkable discoveries in the hot deserts of Australia North Africa Oman and the USA The other seven chapters take the reader through the revolution in scientific research on meteoritics in the later part of the twentieth century including terrestrial impact cratering and extraordinary showers of glass from the sky tektites now known to be Earth impact sourced Finally the short epilogue looks to the future **Encyclopedic Atlas of Terrestrial Impact Craters** Enrico Flamini, Mario

Di Martino, Alessandro Coletta, 2019-06-25 This comprehensive atlas explains the genesis and evolution of impact known craters on Earth presenting a wealth of radar images from the Italian COSMO SkyMed satellites that were acquired at the same frequency spatial resolution operating mode and illumination allowing excellent comparison of different impact structures It also discusses in detail the processes that have hidden or erased terrestrial impact craters and clearly explains the basic principles of remote sensing and the COSMO SkyMed system and radar instruments Also the optical satellite remote sensing technique used to produce the optical images is described The main section documents each of the exposed craters officially recognized as caused by meteoritic impact presenting a table with the COSMO SkyMed radar image and where available a Sentinel optical image and a photograph taken in situ A short accompanying text reports the location context geographical coordinates and other ancillary information to support future researches **Large Meteorite**
