2023 Asia-Pacific International Symposium on Aerospace Technology (APISAT 2023) Proceedings Song Fu, 2024-07-01 This book is a compilation of peer reviewed papers from the 2023 Asia Pacific International Symposium on Aerospace Technology APISAT2023 The symposium is a common endeavour among the four national aerospace societies in China Australia Korea and Japan namely Chinese Society of Aeronautics and Astronautics CSAA Royal Aeronautical Society Australian Division RAeS Australian Division Japan Society for Aeronautical and Space Sciences JSASS and Korean Society for Aeronautical and Space Sciences KSAS APISAT is an annual event initiated in 2009 It aims to provide the opportunity to Asia Pacific nations for the researchers of universities and academic institutes and for the industry engineers to discuss the current and future advanced topics in aeronautical and space engineering This is the volume I of the proceedings *A Unified Computational Fluid Dynamics Framework from Rarefied to Continuum Regimes* Kun Xu, 2021-06-10 This Element presents a unified computational fluid dynamics framework from rarefied to continuum regimes The framework is based on the direct modelling of flow physics in a discretized space The mesh size and time step are used as modelling scales in the construction of discretized governing equations With the variation of cell Knudsen number continuous modelling equations in different regimes have been obtained and the Boltzmann and Navier Stokes equations become two limiting equations in the kinetic and hydrodynamic scales The unified algorithms include the discrete velocity method DVM based unified gas kinetic scheme UGKS the particlebased unified gas kinetic particle method UGKP and the wave and particle based unified gas kinetic wave particle method UGKWP The UGKWP is a multi scale method with the particle for non equilibrium transport and wave for equilibrium evolution The particle dynamics in the rarefied regime and the hydrodynamic flow solver in the continuum regime have been unified according to the cell's Knudsen number Fundamentals of Aerospace Navigation and Guidance Pierre T. Kabamba, Anouck R. Girard, 2014-08-29 This text covers fundamentals used in the navigation and guidance of modern aerospace vehicles in both atmospheric and space flight It can be used as a textbook supporting a graduate level course on aerospace navigation and guidance a guide for self study or a resource for practicing engineers and researchers It begins with an introduction that discusses why navigation and guidance ought to be considered together and delineates the class of systems of interest in navigation and guidance The book then presents the necessary fundamentals in deterministic and stochastic systems theory and applies them to navigation Next the book treats optimization and optimal control for application in optimal guidance In the final chapter the book introduces problems where two competing controls exercise authority over a system leading to differential games Fundamentals of Aerospace Navigation and Guidance features

examples illustrating concepts and homework problems at the end of all chapters Distinct Aerodynamics of Insect-Scale Flight Csaba Hefler, Chang-kwon Kang, Huihe Qiu, Wei Shyy, 2021-05-27 Insect scale flapping wing flight vehicles can conduct environmental monitoring disaster assessment mapping positioning and security in complex and challenging surroundings To develop bio inspired flight vehicles systematic probing based on the particular category of flight vehicles is needed This Element addresses the aerodynamics aeroelasticity geometry stability and dynamics of flexible flapping wings in the insect flight regime The authors highlight distinct features and issues contrast aerodynamic stability between rigid and flexible wings present the implications of the wing aspect ratio and use canonical models and dragonflies to elucidate scientific insight as well as technical capabilities of bio inspired design **Applied Computational Aerodynamics** Russell M. Cummings, Scott A. Morton, William H. Mason, David R. McDaniel, 2015-04-27 This book covers the application of computational fluid dynamics from low speed to high speed flows especially for use in aerospace applications Energy Deposition for High-Speed Flow Control Doyle D. Knight, 2019-02-21 Written by a leading expert in the field this book presents a novel method for controlling high speed flows past aerodynamic shapes using energy deposition via direct current DC laser or microwave discharge and describes selected applications in supersonic and hypersonic flows Emphasizing a deductive approach the fundamental physical principles provided give an understanding of the simplified mathematical models derived therefrom These features along with an extensive set of 55 simulations make the book an invaluable reference that will be of interest to researchers and graduate students working in aerospace engineering and in plasma physics *Nonequilibrium Gas Dynamics and Molecular Simulation* Iain D. Boyd, Thomas E. Schwartzentruber, 2017-03-23 This current and comprehensive book provides an updated treatment of molecular gas dynamics topics for aerospace engineers or anyone researching high temperature gas flows for hypersonic vehicles and propulsion systems It demonstrates how the areas of quantum mechanics kinetic theory and statistical mechanics can combine in order to facilitate the study of nonequilibrium processes of internal energy relaxation and chemistry All of these theoretical ideas are used to explain the direct simulation Monte Carlo DSMC method a numerical technique based on molecular simulation Because this text provides comprehensive coverage of the physical models available for use in the DSMC method in addition to the equations and algorithms required to implement the DSMC numerical method readers will learn to solve nonequilibrium flow problems and perform computer simulations and obtain a more complete understanding of various physical modeling options for DSMC than is available in other texts *Mach Wave and Acoustical Wave Structure in Nonequilibrium Gas-Particle Flows* Joseph T. C. Liu, 2021-10-07 In this Element the gas particle flow problem is formulated with momentum and thermal slip that introduces two relaxation times Starting from acoustical propagation in a medium in equilibrium the relaxation wave equation in airfoil coordinates is derived though a Galilean transformation for uniform flow Steady planar small perturbation supersonic flow is studied in detail according to Whitham s higher order waves The signals owing to wall boundary conditions

are damped along the frozen Mach wave and are both damped and diffusive along an effective intermediate Mach wave and diffusive along the equilibrium Mach wave where the bulk of the disturbance propagates The surface pressure coefficient is obtained exactly for small disturbance theory but it is considerably simplified for the small particle to gas mass loading approximation equivalent to a simple wave approximation Other relaxation wave problems are discussed Martian dust storm properties in terms of gas particle flow parameters are estimated
