Answer: The condition evaluated to true!

- 2) What would be the output of the code in #1 if number was originally initialized to 25? Answer: The condition evaluated to false!
- 3) Write a multi-way if-else statement that evaluates a persons weight on the following criteria: A weight less than 115 pounds, output: Eat 5 banana splits! A weight between 116 pounds and 130 pounds, output: Eat a banana split! A weight between 131 pounds and 200 pounds, output: Perfect! A weight greater than 200 pounds, output: Plenty of banana splits have been consumed!
  Answer:

if(weight <= 115)

System.out.println("Eat 5 banana splits!");
else if(weight <= 130)

System.out.println("Eat a banana split!");
else if(weight <= 200)

System.out.println("Perfect!");

System.out.println("Plenty of banana splits have been consumed!");

Name and describe three types of branching mechanisms and give an example of each.

Answer: Three types of branching mechanisms include the if-else statement, the multi-way if-else statement, and the switch statement. An if-else statement chooses between two alternative statements based on the value of a Boolean expression. If you only need to perform an action if a certain condition is true, then the else part of an if-else statement can be omitted. A multi-way if-else statement allows several conditions to be evaluated. The first condition that evaluates to true, is the branch that is executed. The switch statement is another multi-selection branching mechanism. A switch evaluates a controlling expression and executes the statements in the matching case label.
