		Steps 2-4: Conditionally recommend the use of subcutaneous immunotherapy as an adjunct treatment to standard pharmacotherapy in individuals ≥ 5 years of age whose asthma is controlled at the initiation, build up, and maintenance phases of immunotherapy [▲]			Consider Omalizumab ^{***} ▲	

Assess Control

- First check adherence, inhaler technique, environmental factors,[▲] and comorbid conditions.
- **Step up** if needed; reassess in 2-6 weeks
- **Step down** if possible (if asthma is well controlled for at least 3 consecutive months)

Consult with asthma specialist if Step 4 or higher is required. Consider consultation at Step 3.

Control assessment is a key element of asthma care. This involves both impairment and risk. Use of objective measures, self-reported control, and health care utilization are complementary and should be employed on an ongoing basis, depending on the individual's clinical situation.

Abbreviations: ICS, inhaled corticosteroid; LABA, long-acting beta₂-agonist; LTRA, leukotriene receptor antagonist;

SABA, inhaled short-acting beta₂-agonist

▲ Updated based on the 2020 guidelines.

* Cromolyn, Nedocromil, LTRAs including montelukast, and Theophylline were not considered in this update and/or have limited availability for use in the United States, and/or have an increased risk of adverse consequences and need for monitoring that make their use less desirable. The FDA issued a Boxed Warning for montelukast in March 2020.

*** Omalizumab is the only asthma biologic currently FDA-approved for this age range.

Asthma Guidelines:

Clinical Asthma Jonathan A. Bernstein, Mark L. Levy, 2014-02-06 Enormous progress in asthma research has been made in the past 50 years including a greater understanding of its complex pathogenesis and new and more effective therapies. Consequently the scientific literature has grown vast and can be difficult to integrate. With contributions from a distinguished panel of world renowned authors Clinical Asthma Theory and Practice presents a comprehensive study of both the common and the more challenging problems faced by all health care personnel who treat patients with asthma. The book is divided into seven sections starting with the basics of asthma and ending with a discussion on the approach to asthma worldwide and in the primary care setting. Reflecting a strong clinical emphasis each chapter begins with a patient case study supported by essential background information on the basic science and clinical decision making process. This is followed by a discussion of clinical evaluation and management. The multidisciplinary coverage explores a range of topics including genetics, inflammation, immunology and the identification of different endotypes. Using a bench to bedside approach the book links basic science to the clinical management of asthma and explores options for improvement. The carefully selected authorship from experts worldwide presents a truly global outlook. ABC of Asthma John Rees, Dipak Kanabar, Shriti

Pattani, 2013-05-09 Asthma is a common condition with increasing prevalence. This new edition of the highly regarded ABC of Asthma has been thoroughly revised with reference to the latest British Thoracic Society guidelines on the management of asthma in children and adults. It covers the advances in practice and methods with a new emphasis on delivery systems, self dose assessment and delivery of care with different pharmacological approaches. The ABC of Asthma is a concise up to date overview of all aspects of asthma and includes two new chapters focussing on GP practice issues including clinical management and organisation of asthma care. It is ideal for GPs, junior doctors and medical students, nurses and anyone dealing with the treatment of asthma in children and adults. **Implementation of the Asthma Practice Guideline in**

the Army Medical Department Donna O. Farley, Shan Cretin, Georges Vernez, Suzanne Pieklik, Elaine Quiter, 2005-12-01 In partnership with the Army Medical Department RAND worked to implement clinical practice guidelines. This report evaluates the asthma guideline demonstration. It documents the actions, assesses effects and measures the quality and limitations of data for monitoring outcomes. The authors found that the implementation scored successes but resource limitations and organizational barriers curbed progress. They conclude that flexibility, monitoring and training are the keys to implementing the guidelines. They also found that patient education needed improvement. **Physical Activity and Health Guidelines**
