Plant Functional Genomics Erich Grotewold, 2008-02-03 Functional genomics is a young discipline whose origin can be traced back to the late 1980s and early 1990s when molecular tools became available to determine the cellular functions of genes Today functional genomics is perceived as the analysis often large scale that bridges the structure and organization of genomes and the assessment of gene function The completion in 2000 of the genome sequence of *Arabidopsis thaliana* has created a number of new and exciting challenges in plant functional genomics The immediate task for the plant biology community is to establish the functions of the approximately 25 000 genes present in this model plant One major issue that will remain even after this formidable task is completed is establishing to what degree our understanding of the genome of one model organism such as the dicot *Arabidopsis* provides insight into the organization and function of genes in other plants The genome sequence of rice completed in 2002 as a result of the synergistic interaction of the private and public sectors promises to significantly enrich our knowledge of the general organization of plant genomes However the tools available to investigate gene function in rice are lagging behind those offered by other model plant systems Approaches available to investigate gene function become even more limited for plants other than the model systems of *Arabidopsis* rice and maize

Insect Morphology to Ecology and Evolution is a vital resource for entomologists biologists and zoologists especially those seeking to better understand the morphology and physiological impacts tying insects to environments and evolution Integrates traditionally separate fields of research with the aim of understanding insect morphology ecology and evolution Considers the impacts of insect ecomorphology on biomimetic applications Includes conceptual and methodological chapters to help readers appreciate the ways in which ecomorphological studies are performed

The Morphology and Physiology of Insect Chemosensory Systems - Its Origin and Evolution Rui Tang,Xin-Cheng Zhao,2022-11-10 Invertebrate Learning and Memory Randolph Menzel,Paul Benjamin,2013-06-18

Understanding how memories are induced and maintained is one of the major outstanding questions in modern neuroscience This is difficult to address in the mammalian brain due to its enormous complexity and invertebrates offer major advantages for learning and memory studies because of their relative simplicity Many important discoveries made in invertebrates have been found to be generally applicable to higher organisms and the overarching theme of the proposed will be to integrate information from different levels of neural organization to help generate a complete account of learning and memory Edited by two leaders in the field Invertebrate Learning and Memory will offer a current and comprehensive review with chapters authored by experts in each topic The volume will take a multidisciplinary approach exploring behavioral cellular genetic molecular and computational investigations of memory Coverage will include comparative cognition at the behavioral and mechanistic level developments in concepts and methodologies that will underlie future advancements and mechanistic examples from the most important vertebrate systems nematodes molluscs and insects Neuroscience researchers and graduate students with an interest in the neural control of cognitive behavior will benefit as will as will those in the field of invertebrate learning Presents an overview of invertebrate studies at the molecular cellular neural levels and correlates findings to mammalian behavioral investigations Linking multidisciplinary approaches allows for full understanding of how molecular changes in neurons and circuits underpin behavioral plasticity Edited work with chapters authored by leaders in the field around the globe the broadest most expert coverage available Comprehensive coverage synthesizes widely dispersed research serving as one stop shopping for comparative learning and memory researchers
