Introduction

Trevor Powell, a Consultant Clinical Neuropsychologist, and Kit Malia, Cognitive Rehabilitation Therapist, are well known for their work in brain injury rehabilitation and this workbook provides materials developed by them over their many years in this field.

In his introduction, Trevor Powell describes the context in which he uses these materials. He notes that the workbook is primarily designed for use when working with groups of people with brain injury; though he suggests that it can be used equally well in one-to-one sessions or even by the clients independently. He discusses how the groups in which he has used the materials have five different therapeutic aspects including: focused stimulation (mental exercise); learning compensatory coping strategies; acquiring insight and awareness; emotional adjustment; and improving self-efficacy and feeling more in control.

The workbook provides materials that can be photocopied and handed out to clients and is divided into three parts:

Education about brain injury

Part 1 focuses on education about brain injury. This part provides basic information such as what happens when a head injury occurs, how the severity of head injury is measured, the common consequences of head injury, some basic anatomy of the brain, and the different forms of brain injury. This part concludes with a 'self-assessment' where clients can write notes

on the nature and consequences of their own brain injury.

Resources for cognitive rehabilitation

Part II provides resources for 'cognitive rehabilitation', and is split into sections on Memory, Thinking Skills, and Executive Skills. The section on memory provides information sheets on understanding memory and strategies for remembering things. There is a clear emphasis on using external aids and mental strategies to compensate for impaired memory. There are various memory exercises including remembering rounds of information (in a group) such as a shopping list, remembering pictures, faces and names, Kim's game (remembering objects seen briefly on a tray), word and object lists, remembering stories, designs, menu items, and numbers (PIN numbers, telephone numbers). In the Thinking Skills section, information sheets describe attention, information processing, sensory and perceptual skills and language skills. Information is also provided on ways of improving attention and concentration and language skills as well as how to cope with perceptual and visuo-spatial difficulties. The exercises in this section include various language tasks, perceptual matching tasks, categorisation tasks, selective attention and working memory tasks. The final section of Part II, on Executive Skills, discusses what executive skills are, using the analogies of the managing director of a company or the orchestra conductor, describing the various forms of executive skills and the concept of dysexecutive
