Paziienza,2012-06-28 Physical implementation of the memristor at industrial scale sparked the interest from various disciplines ranging from physics nanotechnology electrical engineering neuroscience to intelligent robotics As any promising new technology it has raised hopes and questions it is an extremely challenging task to live up to the high expectations and to devise revolutionary and feasible future applications for memristive devices The possibility of gathering prominent scientists in the heart of the Silicon Valley given by the 2011 International Joint Conference on Neural Networks held in San Jose CA has offered us the unique opportunity of organizing a series of special events on the present status and future perspectives in neuromorphic memristor science This book presents a selection of the remarkable contributions given by the leaders of the field and it may serve as inspiration and future reference to all researchers that want to explore the extraordinary possibilities given by this revolutionary concept **Osteoimmunology** Yongwon Choi,2009-12-01 It has only recently been appreciated that the immune and skeletal systems have major interactions It is now well documented that

osteoclasts which are important cellular mediators of skeletal homeostasis are derived from hematopoietic precursors that also give rise to immune cells In addition numerous cytokines that were first shown to regulate immune cell function have also been demonstrated to regulate bone cells and influence skeletal health Conversely products of bone cells appear critical for the engraftment of marrow in bone the normal development of the hematopoietic and immune systems and provide niche for long term memory B and T cells In the past scientists involved in immune and bone cell investigations have rarely interacted in a significant way as these disciplines have developed independently and for the most part remain separate The conference will bring together leading international scientists from both fields to interact so that new collaboration can develop and more rapid progress in understanding the relationships between these fields can be achieved Short talks will be selected from abstracts from the international community This conference will have a format to provide an environment of maximum interaction and interchange through lectures posters and open discussion
