Making Sense Ralf Hertel, 2021-07-26. Fiction is fascinating. All it provides us with is black letters on white pages yet while we read we do not have the impression that we are merely perceiving abstract characters. Instead we see the protagonists before our inner eye and hear their voices. Descriptions of sumptuous meals make our mouths water, we feel physically repelled by depictions of violence or are aroused by the erotic details of sexual conquests. We submerge ourselves in the fictional world that no longer stays on the paper but comes to life in our imagination. Reading turns into an out of the body experience or rather an in another body experience for we perceive the portrayed world not only through the protagonist's eyes but also through his ears, nose, tongue and skin. In other words we move through the literary text as if through a virtual reality. How does literature achieve this trick? How does it turn mere letters into vividly experienced worlds? This study argues that techniques of sensuous writing contribute decisively to bringing the text to life in the reader's imagination. In detailed interpretations of British novels of the 1980s and 1990s by writers such as John Berger, John Banville, Salman Rushdie, Jeanette Winterson or J. M. Coetzee it uncovers literary strategies for turning the sensuous experience into words and for conveying it to the reader, demonstrating how we make sense in and of literature. Both readers interested in the contemporary novel and in the sensuousness of the reading experience will profit from this innovative study that not only analyses the interest of contemporary authors in the senses but also pin points literary entry points for the sensuous force of reading.

Brain Storm Rebecca M. Jordan-Young, 2011-10-15. Female and male brains are different thanks to hormones coursing through the brain before birth. That's taught as fact in psychology textbooks, academic journals and bestselling books. And these hardwired differences explain everything from sexual orientation to gender identity to why there aren't more women physicists or more stay at home dads. In this

compelling book Rebecca Jordan Young takes on the evidence that sex differences are hardwired into the brain Analyzing virtually all published research that supports the claims of human brain organization theory Jordan Young reveals how often these studies fail the standards of science Even if careful researchers point out the limits of their own studies other researchers and journalists can easily ignore them because brain organization theory just sounds so right But if a series of methodological weaknesses questionable assumptions inconsistent definitions and enormous gaps between ambiguous findings and grand conclusions have accumulated through the years then science isn't scientific at all Elegantly written this book argues passionately that the analysis of gender differences deserves far more rigorous biologically sophisticated science The evidence for hormonal sex differentiation of the human brain better resembles a hodge podge pile than a solid structure Once we have cleared the rubble we can begin to build newer more scientific stories about human development

Delusions of Gender: How Our Minds, Society, and Neurosexism Create Difference Cordelia Fine, 2011-08-08 Sex discrimination is supposedly a distant memory Yet popular books magazines and even scientific articles defend inequalities by citing immutable biological differences between the male and female brain Why are there so few women in science and engineering so few men in the laundry room Well they say it's our brains *Language at the Speed of Sight* Mark Seidenberg, 2017-01-03 We've been teaching reading wrong a leading cognitive scientist tells us how we can finally do it right
