**Visual Analogy** Barbara Maria Stafford,2001-08-24 A groundbreaking

book exploring the discovery of sameness in otherness Recuperating a topic once central to philosophy theology rhetoric and aesthetics this groundbreaking book explores the discovery of sameness in otherness Analogy poses an intriguingly ancient and modern conundrum How in the face of cultural diversity can a unique someone or something be perceived as like what it is not This book is for anyone puzzled by why today as Barbara Maria Stafford claims we possess no language for talking about resemblance only an exaggerated awareness of difference Well designed images Stafford argues reveal the mind's intuitive leaps to connect known with unknown experience The first of four wide ranging chapters paints a challenging overview of several pressing contemporary issues Cloning legal controversies about social inequity identity politics electronic copying and the mimicry of virtual reality expose the need for a nuanced theory of similitude The second examines the historical tug of war between analogy and allegory or disanalogy Stafford provocatively suggests that since the Romantic Era we have been living in polarizingly allegorical times The third roots this divisiveness within the momentous shift from a magical universe modeled on sexual bonds to an engineered world built of discrete automated units Finally recent developments in computational brain research notwithstanding major phenomenological questions about memory emotion intelligence and awareness beckon In the fourth chapter Stafford intervenes in the consciousness debates to propose a humanistic cognitive science with bridging analogy at its artful core

**Face Value** Alexander Todorov, 2017-05-30 The scientific story of first impressions and why the snap character judgments we make from faces are irresistible but usually incorrect We make up our minds about others after seeing their faces for a fraction of a second and these snap judgments predict all kinds of important decisions For example politicians who simply look more competent are more likely to win elections Yet the character judgments we make from faces are as inaccurate as they are irresistible in most situations we would guess more accurately if we ignored faces So why do we put so much stock in these widely shared impressions What is their purpose if they are completely unreliable In this book Alexander Todorov one of the world's leading researchers on the subject answers these questions as he tells the story of the modern science of first impressions Drawing on psychology cognitive science neuroscience computer science and other fields this accessible and richly illustrated book describes cutting edge research and puts it in the context of the history of efforts to read personality from faces Todorov describes how we have evolved the ability to read basic social signals and momentary emotional states from faces using a network of brain regions dedicated to the processing of faces Yet contrary to the nineteenth century pseudoscience of physiognomy and even some of today's psychologists faces don't provide us a map to the personalities of others Rather the impressions we draw from faces reveal a map of our own biases and stereotypes A fascinating scientific account of first impressions **Face Value** explains why we pay so much attention to faces why they lead us astray and what our judgments actually tell us

**The Evolution of Memory Systems** Elisabeth A. Murray, Steven P. Wise, Kim S. Graham, 2017 The Evolution of Memory Systems sets out a bold and exciting new theory about memory It proposes that several memory systems arose during evolution and

that they did so for the same general reason to transcend problems and exploit opportunities encountered by specific ancestors at particular times and places in the distant past
