Conti, Vivina Laura Barutello, 2006 **Metodi di Analisi Matematica per l'Ingegneria** Marco Bramanti, 2019-08-01 Il libro nasce dalla rielaborazione del materiale preparato per alcuni corsi di Metodi Matematici per l Ingegneria e di Elementi di Analisi Funzionale e Trasformate tenuti al Politecnico di Milano negli ultimi anni e pu essere utilizzato per costruire corsi di tipo diverso scegliendo opportunamente dai vari capitoli Il testo ha come solo prerequisito l analisi matematica tradizionalmente insegnata nei corsi di base di ingegneria e presenta anzitutto gli argomenti istituzionali dell analisi matematica superiore generalit sugli spazi vettoriali normati convergenza uniforme spazi di funzioni continue misura e integrale di Lebesgue spazi di funzioni integrabili generalit su operatori e funzionali lineari continui spazi di Hilbert teoria delle funzioni derivabili di variabile complessa Seguono poi argomenti pi operativi e ricchi di applicazioni i metodi di ortogonalit per questioni di approssimazione o di risoluzione di problemi differenziali le trasformate integrali di Fourier e di Laplace con un certo ventaglio di applicazioni i primi elementi della teoria delle distribuzioni con applicazioni alla teoria dei

filtri Le applicazioni fisico matematiche o fisico ingegneristiche presenti nel testo sono numerose e scelte da settori diversi Il testo costruito con una certa modularit  Ad esempio l'eventuale esclusione della teoria delle funzioni di variabile complessa dal programma del corso non pregiudica la comprensione delle altre parti del libro Della maggior parte dei risultati enunciati nel testo fornita una dimostrazione per altri sono dati riferimenti bibliografici Alla fine di ogni capitolo presente un certo assortimento di esercizi tutti forniti di svolgimenti completi che si trovano nella versione online del testo

Elements of Advanced Mathematical Analysis for Physics and Engineering Filippo Gazzola, Alberto Ferrero, Maurizio Zanotti, 2015-08-26

Deep comprehension of applied sciences requires a solid knowledge of Mathematical Analysis For most of high level scientific research the good understanding of Functional Analysis and weak solutions to differential equations is essential This book aims to deal with the main topics that are necessary to achieve such a knowledge Still this is the goal of many other texts in advanced analysis and then what would be a good reason to read or to consult this book In order to answer this question let us introduce the three Authors Alberto Ferrero got his degree in Mathematics in 2000 and presently he is researcher in Mathematical Analysis at the Universit  del Piemonte Orientale Filippo Gazzola got his degree in Mathematics in 1987 and he is now full professor in Mathematical Analysis at the Politecnico di Milano Maurizio Zanotti got his degree in Mechanical Engineering in 2004 and presently he is structural and machine designer and lecturer professor in Mathematical Analysis at the Politecnico di Milano The three Authors for the variety of their skills decided to join their expertises to write this book One of the reasons that should encourage its reading is that the presentation turns out to be a reasonable compromise among the essential mathematical rigor the importance of the applications and the clearness which is necessary to make the reference work pleasant to the readers even to the inexperienced ones The range of treated topics is quite wide and covers the main basic notions of the scientific research which is based upon mathematical models We start from vector spaces and Lebesgue integral to reach the frontier of theoretical research such as the study of critical exponents for semilinear elliptic equations and recent problems in fluid dynamics This long route passes through the theory of Banach and Hilbert spaces Sobolev spaces differential equations Fourier and Laplace transforms before which we recall some appropriate tools of Complex Analysis We give all the proofs that have some didactic or applicative interest while we omit the ones which are too technical or require too high level knowledge This book has the ambitious purpose to be useful to a broad variety of readers The first possible beneficiaries are of course the second or third year students of a scientific course of degree in what follows they will find the topics that are necessary to approach more advanced studies in Mathematics and in other fields especially Physics and Engineering This text could be also useful to graduate students who want to start a Ph D course indeed it contains the matter of a multidisciplinary Ph D course given by Filippo Gazzola for several years at Politecnico di Milano Finally this book could be addressed also to the ones who have already left education far back but occasionally need to use mathematical tools we refer both to university professors and their research and to professionals

and designers who want to model a certain phenomenon but also to the nostalgics of the good old days when they were students It is precisely for this last type of reader that we have also reported some elementary topics such as the properties of numerical sets and of the integrals moreover every chapter is provided with examples and specific exercises aimed at the involvement of the reader

Elementi di Analisi Superiore per la Fisica e Ingegneria Alberto Ferrero, Filippo Gazzola, Maurizio Zanotti, 2020-04-01 La gamma di argomenti trattati piuttosto vasta e copre i principali prerequisiti della ricerca scientifica basata su modelli matematici Si parte dagli spazi vettoriali e dall'integrale di Lebesgue per arrivare fino ai confini della ricerca teorica come lo studio di esponenti critici per le equazioni ellittiche semilineari e i problemi attuali della fluidodinamica Questo lungo percorso attraversa la teoria degli spazi di Banach e di Hilbert gli spazi di Sobolev le equazioni differenziali le trasformate di Fourier e Laplace alle quali sono premessi opportuni strumenti di analisi complessa Sono state riportate tutte le dimostrazioni con un interesse didattico o applicativo sono state invece omesse quelle dimostrazioni troppo tecniche o che richiedono troppe conoscenze Questo libro ha l'ambizioso proposito di essere utile a un'ampia tipologia di lettori I primi possibili beneficiari sono sicuramente gli studenti del secondo o terzo anno di un corso di laurea scientifico qui di seguito troveranno quegli argomenti che servono per iniziare studi più approfonditi in Matematica e in altre discipline specialmente la Fisica e l'Ingegneria Ma questo libro potrebbe anche essere utile a studenti già laureati che intendano iniziare un dottorato di ricerca contiene infatti il materiale di un corso di dottorato multidisciplinare tenuto per vari anni da Filippo Gazzola al Politecnico di Milano Infine questo libro potrebbe interessare anche a chi ha già abbandonato gli studi da tempo ma ha saltuariamente bisogno di utilizzare strumenti matematici ci riferiamo sia a docenti universitari e alla loro ricerca sia a professionisti e progettisti che intendano modellizzare un certo fenomeno sia a nostalgici dei bei tempi quando erano ancora studenti
