Bre Good Repair Guide 1:

Building Maintenance Brian J.B. Wood, 2009-09-28 Maintaining a building is expensive it costs many times more to run a building over its lifetime than to build it yet maintenance is often not accorded the priority it warrants A poorly maintained building will be a drain on resources and will impair building use whereas a well maintained building will function smoothly and represent an appreciating asset to its owners Building Maintenance is a core text on the technical aspects of maintenance for undergraduate degree students on built environment courses particularly building surveying and facilities management It addresses the who what where when how and why of maintenance activities and shows that maintenance should be considered seriously at the design stage Extensive case studies illustrate what can go wrong how to put matters right and how to get it right first time next time A professional approach is required to building maintenance By encouraging maintenance managers to stand back and take a strategic view of building maintenance alongside their day to day tasks this book will help practitioners and students to achieve that

Diagnosing Damp Ralph Burkinshaw, Mike Parrett, 2003 Diagnosing damp takes the surveyor through the necessary techniques for undertaking a thorough examination of a building for dampness and to understand the limitations imposed at each level of investigation

Materials for Architects and Builders Arthur Lyons, 2010-08-31 A necessary purchase for level 1 and 2 undergraduates studying building construction materials modules Materials for Architects and Builders provides an introduction to the broad range of materials used within the construction industry and contains information pertaining to their manufacture key physical properties specification and uses Construction Materials is a core module on all undergraduate and diploma construction related courses and this established textbook is illustrated in colour throughout with many photographs and diagrams to help students understand the key principles This new edition has been completely revised and updated to include the latest developments in materials appropriate technologies and relevant legislation The current concern for the ecological effects of building construction and lifetime use are reflected in the emphasis given to sustainability and recycling An additional chapter on sustainability and governmental carbon targets reinforces this issue

Masonry Wall Construction A.W. Hendry, F. M. Khalaf, 2017-09-11 This volume provides a concise overview of the main facets of masonry wall construction including materials structural design types of walls movement insulation rain exclusion site practice defects and repair The subject is covered in sufficient depth for a comprehensive introduction with reading lists after each chapter

Refurbishment and Upgrading of Buildings David Highfield, Christopher Gorse, 2009-05-28 A detailed guide to the technical aspects of refurbishing and upgrading buildings this book provides solutions to a range of problems challenges and issues and is essential reading for all students studying building refurbishment at all levels Includes existing floor and wall strengthening facade retention introduction of new floors timber decay problems fire resistance prevention of moisture and damp upgrading thermal and acoustic performance This new edition has been fully updated to include new technological information and covers new areas such as stonework

restoration and repair upgrading of c1960 framed buildings refurbishment logistics and case studies *Materials for Architects and Builders* Arthur R. Lyons, 2007 *Materials for Architects and Builders* provides an introduction to a wide range of building materials. It explains in detail the manufacture, key physical properties, specification and uses of the standard building products everything a student would need to know. The book also describes many recent technological innovations and rediscovered materials reflecting an increased concern for environmental issues within the Industry. This new edition has been completely updated to reflect the amended Building Regulations, the latest British and European Standards as well as incorporating current advice and information from the Building Research Establishment. Dr Arthur Lyons is a teacher fellow and principal lecturer in building materials at the Leicester School of Architecture within the Faculty of Art and Design at De Montfort University UK. He has taught the subject of building materials for thirty five years to a wide range of students within the built environment disciplines. The text covers the widest range of materials from standard products to ecofriendly materials and components. Up to date with respect to the latest Building Regulations and European British Standards. Well illustrated with many colour images showing typical use of the materials in high quality construction. **BRE Good Building Guide**, 2007 **Construction Materials** Peter Domone, John Illston, 2010-05-21 So far in the twenty first century there have been many developments in our understanding of materials behaviour and in their technology and use. This new edition has been expanded to cover recent developments such as the use of glass as a structural material. It also now examines the contribution that material selection makes to sustainable construction practice considering the availability of raw materials, production, recycling and reuse which all contribute to the life cycle assessment of structures. As well as being brought up to date with current usage and performance standards, each section now also contains an extra chapter on recycling. Covers the following materials: metals, concrete, ceramics including bricks and masonry, polymers, fibre composites, bituminous materials, timber, glass. This new edition maintains our familiar and accessible format starting with fundamental principles and continuing with a section on each of the major groups of materials. It gives you a clear and comprehensive perspective on the whole range of materials used in modern construction. A must have for Civil and Structural engineering students and for students of architecture, surveying or construction on courses which require an understanding of materials.

Survey and Repair of Traditional Buildings Richard Oxley, 2015-11-17 Understanding the unique requirements of traditional buildings is crucial to providing appropriate guidance on their care and repair. This book will help practitioners identify the particular issues relating to older buildings and the problems they may encounter when surveying and repairing them. With the use of examples, the author provides invaluable information on how traditional buildings perform, emphasizing the need for a sensitive and sustainable approach which also takes account of the specific needs of the building. The book examines all aspects to be included in any assessment for survey and repair and points out in detail the potential pitfalls. It also explores the controversial issues surrounding the treatment of damp and timber decay, advocating solutions that are

appropriate to older buildings rather than using standard often damaging methods of treatment The extensive case studies not only illustrate good conservation in practice but also how projects can go badly wrong and how mistakes could have been avoided This title explores the causes of movement and the actions required It advises on alternatives to chemical treatment for damp and timber decay It provides fully illustrated case studies with numerous photographs It emphasizes a sustainable approach to conservation It outlines the key legislation issues It includes the Historic Buildings Prosecution Fines Database and other useful appendices
