An Object Description Language for Distributed Discrete Event Simulations Harold Gregory Andrews, 2001 The language structure follows the notions of stimulus response and completely isolates simulation object instances from each other Inter object communication occurs solely through message passing Several example applications are described **Discrete Event Simulation** Udo W. Pooch, James A. Wall, 2024-11-01 Discrete Event Simulation is a process oriented text reference that utilizes an eleven step model to represent the simulation process from problem formulation to implementation and documentation The book presents the necessary level of detail required to fully develop a model that produces meaningful results and considers the tools necessary to interpret those results Sufficient background information is provided so that the underlying concepts of simulation are understood Major topics covered in Discrete Event Simulation include probability and distributional theory statistical estimation and inference the generation of random variates verification and validation techniques time management methods experimental design and programming language considerations The book also examines distributed simulation and issues related to distributing the physical process over a network of tightly coupled processors Topics covered in this area include deadlock synchronization rollback event management and communication processes Fully worked examples and numerous practical exercises have been drawn from the engineering disciplines and computer science although they have been structured so that they will be useful as well to other disciplines such as economics business administration and management science The presentation of techniques and methods in Discrete Event Simulation make it an ideal text reference for all practitioners of discrete event simulation *Discrete-Event Modeling and Simulation* Gabriel A. Wainer, Pieter J. Mosterman, 2018-09-03 Collecting the work of the foremost scientists in the field Discrete Event Modeling and Simulation Theory and Applications presents the state of the art in modeling discrete event systems using the discrete event system specification DEVS approach It introduces the latest advances recent extensions of formal techniques and real world examples of various applications The book covers many topics that pertain to several layers of the modeling and simulation architecture It discusses DEVS model development support and the interaction of DEVS with other methodologies It describes different forms of simulation supported by DEVS the use of real time DEVS simulation the relationship between DEVS and graph transformation the influence of DEVS variants on simulation performance and interoperability and composability with emphasis on DEVS standardization The text also examines extensions to DEVS new formalisms and abstractions of DEVS models as well as the theory and analysis behind real world system identification and control To support the generation and search of optimal models of a system a framework is developed based on the system entity structure and its transformation to DEVS simulation models In addition the book explores numerous interesting examples that illustrate the use of DEVS to build successful applications including optical network on chip construction building design process control workflow systems and environmental models A one stop resource on advances in DEVS

theory applications and methodology this volume offers a sampling of the best research in the area a broad picture of the DEVS landscape and trend setting applications enabled by the DEVS approach It provides the basis for future research discoveries and encourages the development of new applications

Conference proceedings Norman Meyrowitz, 1988 **Recent Advances in Parallel Virtual Machine and Message Passing Interface** Yiannis Cotronis, Jack Dongarra, 2003-06-30 Parallel Virtual Machine PVM and Message Passing Interface MPI are the most frequently used tools for programming according to the message passing paradigm which is considered one of the best ways to develop parallel appli tions This volume comprises 50 revised contributions presented at the Eighth ropean PVM MPI Users Group Meeting which was held on Santorini Thera Greece 23 26 September 2001

The conference was organized by the Department of Informatics and Telecommunications University of Athens Greece. This conference has been previously held in Balatonfüred Hungary 2000, Barcelona Spain 1999, Liverpool UK 1998, and Krakow Poland 1997. The first three conferences were devoted to PVM and were held at the TU Munich Germany 1996, the ENS Lyon France 1995, and the University of Rome 1994. This conference has become a forum for users and developers of PVM, MPI, and other message passing environments. Interaction between these groups has proved to be very useful for developing new ideas in parallel computing and for applying some of those already existent to new practical fields. The main topics of the meeting were evaluation and performance of PVM and MPI extensions and improvements to PVM and MPI algorithms using the message passing paradigm and applications in science and engineering based on message passing. The conference included one tutorial on MPI and 9 invited talks on advances in MPI, cluster computing, network computing, Grid computing, and parallel programming and programming systems. These proceedings contain papers on the 46 oral presentations together with 4 poster presentations.
