An Introduction To Identification Dover Books On Electrical Engineering:

An Introduction to Identification J. P. Norton, 2009-01-01 Suitable for advanced undergraduates and graduate students this text covers the theoretical basis for mathematical modeling as well as a variety of identification algorithms and their applications 1986 edition **Active Fault-Tolerant Control Systems** Tushar Jain, Joseph J. Yamé, Dominique Sauter, 2017-10-20 The book introduces novel algorithms for designing fault tolerant control FTC systems using the behavioral system theoretic approach and presents a demonstration of successful novel FTC mechanisms on several benchmark examples The authors also discuss a new transient management scheme which is an essential requirement for the implementation of active FTC systems and two data driven methodologies that are broadly classified as active FTC systems the projection based approach and the online redesign approach These algorithms do not require much a priori information about the plant in real time and in addition this novel implementation of active FTC systems circumvents various weaknesses induced by using a diagnostic module in real time The book provides graduate students taking masters and doctoral courses in mathematics control and electrical engineering an excellent stepping stone for their research It also appeals to practitioners interested to apply innovative fail safe control techniques CONTROL SYSTEMS, ROBOTICS AND AUTOMATION - Volume VI Heinz D. Unbehauen, 2009-10-11 This Encyclopedia of Control Systems Robotics and Automation is a component of the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias This 22 volume set contains 240 chapters each of size 5000 30000 words with perspectives applications and extensive illustrations It is the only publication of its kind carrying state of the art knowledge in the fields of Control Systems Robotics and Automation and is aimed by virtue of the several applications at the following five major target audiences University and College Students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers and NGOs *Mathematical Modeling and Simulation of Systems* Serhiy Shkarlet, Anatoliy Morozov, Alexander Palagin, Dmitri Vinnikov, Nikolai Stoianov, Mark Zhelezniak, Volodymyr Kazymyr, 2022-02-23 This book contains works on mathematical and simulation modeling of processes in various domains ecology and geographic information systems IT industry and project management The development of complex multicomponent systems requires an increase in accuracy efficiency and adequacy while reducing the cost of their creation The studies presented in the book are useful to specialists who involved in the development of real events models analog management and decision making models production models and software products Scientists can get acquainted with the latest research in various decisions proposed by leading scholars and identify promising directions for solving complex scientific and practical problems The chapters of this book contain the contributions presented on the 16th International Scientific practical Conference MODS June 28 July 01 2021 Chernihiv Ukraine *Identification of Dynamic Systems* Rolf Isermann, Marco Münchhof, 2010-11-22 Precise dynamic models of processes are required for many applications ranging from control engineering to the natural

sciences and economics Frequently such precise models cannot be derived using theoretical considerations alone Therefore they must be determined experimentally This book treats the determination of dynamic models based on measurements taken at the process which is known as system identification or process identification Both offline and online methods are presented i e methods that post process the measured data as well as methods that provide models during the measurement The book is theory oriented and application oriented and most methods covered have been used successfully in practical applications for many different processes Illustrative examples in this book with real measured data range from hydraulic and electric actuators up to combustion engines Real experimental data is also provided on the Springer webpage allowing readers to gather their first experience with the methods presented in this book Among others the book covers the following subjects determination of the non parametric frequency response fast Fourier transform correlation analysis parameter estimation with a focus on the method of Least Squares and modifications identification of time variant processes identification in closed loop identification of continuous time processes and subspace methods Some methods for nonlinear system identification are also considered such as the Extended Kalman filter and neural networks The different methods are compared by using a real three mass oscillator process a model of a drive train For many identification methods hints for the practical implementation and application are provided The book is intended to meet the needs of students and practicing engineers working in research and development design and manufacturing
