Mathematical Analysis Andrew Browder, 2012-12-06 This is a textbook suitable for a year long course in analysis at the advanced undergraduate or possibly beginning graduate level It is intended for students with a strong background in calculus and linear algebra and a strong motivation to learn mathematics for its own sake At this stage of their education such students are generally given a course in abstract algebra and a course in analysis which give the fundamentals of these two areas as mathematicians today conceive them Mathematics is now a subject splintered into many specialties and sub specialties but most of it can be placed roughly into three categories algebra geometry and analysis In fact almost all mathematics done today is a mixture of algebra geometry and analysis and some of the most interesting results are obtained by the application of analysis to algebra say or geometry to analysis in a fresh and surprising way What then do these categories signify Algebra is the mathematics that arises from the ancient experiences of addition and multiplication of whole numbers it deals with the finite and discrete Geometry is the mathematics that grows out of spatial experience it is concerned with shape and form and with measuring where algebra deals with counting
