Office hours: Tue/Thu 3:30-5, 226 Magruder

Course description and objectives: This course will offer a survey of the main themes, theories, and approaches developed in the field of Science and Technology Studies (STS). Graduate students will have the opportunity to explore concepts and methods that will enable them to develop their projects in the history of science and technology according to traditional and current theoretical debates in the field. In the last three decades history of science and technology scholars have contributed enormously to the development of STS, and at the same time have adopted concepts and shared perspectives of contiguous disciplines, such as sociology and anthropology of science. The selection of readings described in detail below, reflects this consolidated and fruitful interdisciplinary approach. In addition to this, in recent years engineering and medical schools, but also physical and biological sciences department, have introduced social studies of science in their curricula. For this reason, while it is intended to satisfy the needs of graduate students in the history department (and other humanities and social science units) this course offers students from other disciplines, including engineering, medicine, and geo-physical sciences, an opportunity to engage critically with problems and questions concerning the social impact and relevance of scientific research and applied science.

The format of the course will be that of a graduate colloquium, which meets for three hours once a week. The main goal is to give students the opportunity to discuss relevant themes in Science and Technology Studies through the reading of classic works in the field and through a selection of current themes/debates, such as climate change, energy politics, and the relative socio-technical controversies, to which STS scholars have contributed through their analyses and policy-oriented discussions.

The evaluation of students' work will be based on weekly response papers, and a final paper of their choice, exploring one of the themes discussed during the course. The goal of the short weekly papers is to develop writing abilities and a style that privileges synthesis and straightforwardness in addressing theoretical and methodological questions. This will also contribute to the professionalization of graduate students who will have to submit conference and article proposals. Each weekly paper will be graded. The average of weekly papers' grades and in class participation will amount to the 70% of the final grade. The remaining 30% will be based on the evaluation of a final paper (of about 20-

An Introduction to Science Studies John M. Ziman, 1987-07-23 The purpose of this book is to give a coherent account of the different perspectives on science and technology that are normally studied under various disciplinary heads such as philosophy of science sociology of science and science policy It is intended for students embarking on courses in these subjects and assumes no special knowledge of any science It is written in a direct and simple style and technical language is introduced very sparingly As various perspectives are sketched out in this book the reader moves towards a consistent conception of contemporary science as a rapidly changing social institution that has already grown out of its traditional forms and plays a central role in society at large It will appeal to students in a wide range of scientific disciplines and complement well Professor Ziman's earlier books

Handbook of Science and Technology Studies Sheila Jasanoff, Gerald E Markle, James C Peterson, Trevor Pinch, 2001-11-01 This volume represents the social constructivist turn of the field It is evident that social constructivism made a major impact on the field during the 1970s and 1980s The diverse papers included here highlight the role of ethnography in STS In addition we are exposed to new perspectives of the multicultural and gendered nature of knowledge production Science Technology and Society For the most current comprehensive resource in this rapidly evolving field look no further than the Revised Edition of the Handbook of Science and Technology Studies This masterful volume is the first resource in more than 15 years to define summarize and synthesize this complex multidisciplinary international field Tightly edited with contributions by an internationally recognized team of leading scholars this volume addresses the crucial contemporary issues both traditional and nonconventional social studies political studies and humanistic studies in this changing field Containing theoretical essays extensive literature reviews and detailed case studies this remarkable volume clearly sets the standard for the field It does nothing less than establish itself as the benchmark one that will carry the field well into the next century The long awaited Handbook of Science and Technology Studies sponsored by the Society for Social Studies of Science is a truly substantial work both in size and in the breadth of its many contributions It is a rich and valuable guide to much that is transpiring in the field of Science and Technology Studies In the editors words it is an unconventional but arresting atlas of the field at a particular moment in its history Science Technology Society This book is not only an important resource for practitioners but it also may help to spark the curiosity of those who are outside the field including scientists and engineers themselves and so pull the half seen world of science and technology studies even more fully into the light of day American Scientist The book as a whole is an impressive testimony to the vitality of a burgeoning field New Scientist It reflects the international and interdisciplinary nature of the society An excellent resource Choice

Social Studies of Science and Technology: Looking Back, Ahead B. Joerges, H. Nowotny, 2012-12-06 BERNW ARD JOERGES AND HELGA NOWOTNY YET ANOTHER TURN The thing that doesn't fit is the

thing that's most interesting Richard Feynman This volume was originally conceived as a contribution to yet another turn not captured by one of the many adjectives that have served to describe the collective meandering of the scholarly community in search of direction It was meant to mark the millennial turn a seemingly purely chronological event but one in search for great meanings and invested with loaded significances The editors wanted to seize the opportunity of the moment in order to pause and reflect on the sociology and history of social studies of science and technology The moment came and went and the new millennium barely nine months later thrust its historical marker upon the world through a horrendous and cruel shock in an unforeseen and unforeseeable way Since then the world appears more vulnerable and volatile fragmented and fraught with uncertainty The universal values as bequeathed by the Enlightenment are either refused or appear refuted The dream of a universal civilization which has accompanied the unfolding of the existing multiple modernities in their historically unique trajectories has been discarded and its promises in tatters **Latin American Breakthroughs in STS**

Theory Noela Invernizzi, Leandro Rodriguez Medina, 2025-09-22 This book enriches Latin American Science and Technology Studies by making a pioneering contribution to theories from its geopolitical margins Rather than merely challenging Northern dominance it fosters dialogue between Northern and Southern scholars highlighting the complex multi-situated development of science and technology and contributing to the field's diversification and internationalization The Oxford Handbook of Interdisciplinarity Robert Frodeman, Julie Thompson Klein, Roberto C.
