Co-simulations of Microwave Circuits and High-Frequency Electromagnetic Fields Mei Song Tong, Xiao Yu Li, 2024-07-03 This book aims to provide many advanced application topics for microwave circuits and high frequency electromagnetic EM fields by using advanced design system ADS and high frequency structure simulator HFSS as simulation platforms In particular it contains the latest multidisciplinary co simulation guidance on the design of relevant components and devices Currently the circuit field design and performance analysis and optimization strongly rely on various kinds of robust electronic design automation EDA software RF microwave engineers must grasp two or more types of related simulation design software ADS by Keysight and HFSS by Ansys are the representative for circuit simulations and for field and structural simulations of microwave devices respectively At present these two types of software are widely used in enterprises universities and research institutions The main purpose of this book is to enable readers who are interested in microwave engineering and applied electromagnetics to master the applications of these two tools It also helps readers expand their knowledge boundaries behind those types of software and deepen their understanding of developing interdisciplinary technologies by co simulations The book is divided

into three parts The first part introduces the two latest versions of ADS and HFSS and helps readers better understand the basic principles and latest functions better It also advises how to choose appropriate simulation tools for different problems The second part mainly describes co simulations for high frequency EM fields microwave circuits antenna designs EM compatibility EMC and thermal and structural analyses It provides guides and advices on performing co simulations by ADS and HFSS incorporated with other types of software respectively The last part narrates the automation interfaces and script programming methods for co simulations It primarily deals with the Advanced Extension Language AEL Python Data Link PDL and MATLAB interface in ADS For HFSS it discusses VBScript IronPython scripting and Application Programming Interface APIs based on MATLAB Each topic contains practical examples to help readers understand so that they can gain a solid knowledge and skills regarding automated interfaces and scripting methods based on these kinds of software Concisely written in combination with practical examples this book is very suitable as a textbook in introductory courses on microwave circuit and EM simulations and also as a supplementary textbook in many courses on electronics microwave engineering communication engineering and related fields As well it can serve as a reference book for microwave engineers and researchers

Radio Frequency Identification and Sensors Etienne Perret, 2014-12-04 This book deals with the field of identification and sensors more precisely the possibility of collecting information remotely with RF waves RFID The book introduces the technology of chipless RFID starting from classical RFID and barcode and explores the field of identification and sensors without wire without batteries without chip and with tags that can even be printed on paper A technique for automatic design of UHF RFID tags is presented aiming at making the tags as insensitive as possible to the environment with the ability to increase the reading range reliability or conversely making them sensitive in order to produce sensors meanwhile keeping their unique ID The RFID advantages are discussed along with its numerous features and comparisons with the barcode technology are presented After that the new chipless RFID technology is introduced on the basis of the previous conclusions Original technological approaches are introduced and discussed in order to demonstrate the practical and economic potential of the chipless technology

Transistor Level Modeling for Analog/RF IC Design Wladyslaw Grabinski, Bart Nauwelaers, Dominique Schreurs, 2006-07-01 Among many great inventions made in the 20th century electronic circuits which later evolved into integrated circuits are probably the biggest when considering their contribution to human society Entering the 21st century the importance of integrated circuits has increased even more In fact without the help of integrated circuits recent high technology society with the internet cellular phone car navigation digital camera and robot would never have been realized Nowadays integrated circuits are indispensable for almost every activity of our society One of the critical issues for the fabrication of integrated circuits has been the precise design of the high speed or high frequency operation of circuits with huge number of components It is quite natural to predict the circuit operation by computer calculation and there have been three waves for this at 15 year intervals The first wave came at the beginning of the

1970s when LSIs Large Scale Integrated circuits with more than 1000 components had just been introduced into the market. A mainframe computer was used for the simulation and each semiconductor company used its own proprietary simulators and device models. However, the capability of the computer and accuracy of the model were far from satisfactory and there are many cases of the necessity of circuit redesign after evaluation of the first chip. The second wave hit us in the middle of 1980s when the EWS Engineering Work Station was introduced for use by designers.

NASA Tech Briefs, 1997 *RFIC and MMIC Design and Technology* I.D. Robertson, S. Lucyszyn, Institution of Electrical Engineers, 2001-11-30. This book gives an in-depth account of GaAs, InP and SiGe technologies and describes all the key techniques for the design of amplifiers ranging from filters and data converters to image oscillators, mixers, switches, variable attenuators, phase shifters, integrated antennas and complete monolithic transceivers.

Generalized Filter Design by Computer Optimization Djuradj Budimir, 1998. Design better, more effective RF, microwave and millimeter wave filters in substantially less time with this practical new book. It shows you how to employ sophisticated optimization based approaches to filter design and provides ready-made CAD filter design algorithms that help you easily develop a wide variety of filter configurations.

The RF and Microwave Handbook - 3 Volume Set Mike Golio, 2018-10-08. By 1990 the wireless revolution had begun. In late 2000 Mike Golio gave the world a significant tool to use in this revolution: The RF and Microwave Handbook. Since then, wireless technology spread across the globe with unprecedented speed, fueled by 3G and 4G mobile technology and the proliferation of wireless LANs. Updated to reflect this tremendous growth, the second edition of this widely embraced bestselling handbook divides its coverage conveniently into a set of three books, each focused on a particular aspect of the technology. Six new chapters cover WiMAX, broadband cable, bit error ratio (BER) testing, high power PAs, power amplifiers, heterojunction bipolar transistors (HBTs) as well as an overview of microwave engineering. Over 100 contributors with diverse backgrounds in academic, industrial, government, manufacturing, design and research reflect the breadth and depth of the field. This eclectic mix of contributors ensures that the coverage balances fundamental technical issues with the important business and marketing constraints that define commercial RF and microwave engineering. Focused chapters filled with formulas, charts, graphs, diagrams and tables make the information easy to locate and apply to practical cases. The new format, three tightly focused volumes, provides not only increased information but also ease of use. You can find the information you need quickly without wading through material you don't immediately need, giving you access to the caliber of data you have come to expect in a much more user-friendly format.
