Atmosphere, Ocean and Climate Dynamics John Marshall, R. Alan Plumb, 2007-12-19 For advanced undergraduate and beginning graduate students in atmospheric oceanic and climate science *Atmosphere Ocean and Climate Dynamics* is an introductory textbook on the circulations of the atmosphere and ocean and their interaction with an emphasis on global scales It will give students a good grasp of what the atmosphere and oceans look like on the large scale and why they look that way The role of the oceans in climate and paleoclimate is also discussed The combination of observations theory and accompanying illustrative laboratory experiments sets this text apart by making it accessible to students with no prior training in meteorology or oceanography Written at a mathematical level that is appealing for undergraduates and beginning graduate students Provides a useful educational tool through a combination of observations and laboratory demonstrations which can be viewed over the web Contains instructions on how to reproduce the simple but informative laboratory experiments Includes copious problems with sample answers to help students learn the material

Intraseasonal Variability in the Atmosphere-Ocean Climate System William K.-M. Lau, Duane E. Waliser, 2011-10-25 Improving the reliability of long range forecasts of natural disasters such as severe weather droughts and floods in North America South America Africa and the Asian Australasian monsoon regions is of vital importance to the livelihood of millions of people who are affected by these events In recent years the significance of major short term climatic variability and events such as the El Nino Southern Oscillation in the Pacific with its worldwide effect on rainfall patterns has been all too clearly demonstrated Understanding and predicting the intra seasonal variability ISV of the ocean and atmosphere is crucial to improving long range environmental forecasts and the reliability of climate change projects through climate models In the second edition of this classic book on the subject the authors have updated the original chapters where appropriate and added a new chapter that includes short subjects representing substantial new development in ISV research since the publication of the first edition

Ocean Processes in Climate

Dynamics P.M. Malanotte-Rizzoli, Allan R. Robinson, 2012-12-06 One of the most crucial but still very poorly understood topics of oceanographic science is the role of ocean processes in contributing to the dynamics of climate and global change This book presents a series of high level lectures on the major categories of ocean atmosphere processes Three of these major issues are the focus of the lectures 1 air sea interaction processes 2 water mass formation dispersion and mixing 3 general circulation with specific emphasis on the thermohaline component Global examples in the world ocean are provided and discussed in the lectures In parallel the Mediterranean Sea is a laboratory basin in providing analogues of the above global processes relevant to climate dynamics They include the Mediterranean thermohaline circulation with its own conveyor belt intermediate and deep water mass formation and transformations dispersion and mixing No other book in the field provides a review of fundamental lectures on these processes coupled with global examples and their Mediterranean analogues
