**Management of Hydrological Systems** Holger Benavides Muñoz, Jorge Arias Zari, Andreas Fries, José Sánchez-Paladines, Antonio Gallegos Reina, Raquel Hernández Ocampo, Pablo Ochoa Cueva, 2020-05-14 The contingent valuation of water is one of the key components when wanting to implement proposals for integrated water management in mountain basins Management of Hydrological Systems MHS is one of the great challenges that the Sustainable Development Goals SDGs currently demand Mainly in mountain basins with fragile ecosystems that face strong pressures such as poverty urban and population growth low water supply and sanitation and climate change Management of Hydrological Systems aims for sustainable water management through contingent water valuation showing the reader in a didactic way the procedure to follow in mountain basins This book offers a complete characterization of the main problems affecting this type of basin as well as the detailed procedure of the contingent valuation of water which directly involves users As such this work is offered in relation to this urgent need for practical guidance demanded by society SDGs and is based on practical and real examples rather than theoretical constructions from places where these issues have not been widely addressed The text is recommended as a way forward not only for water

resource managers and decision and policymakers but also for students and teachers who wish to implement this MHS guide

*Environmental Science and Technology* Stanley E. Manahan, 2006-10-20 Formally established by the EPA nearly 15 years ago the concept of green chemistry is beginning to come of age Although several books cover green chemistry and chemical engineering none of them transfer green principles to science and technology in general and their impact on the future Defining industrial ecology *Environmental Science and Technology A Sustainable Approach to Green Science and Technology* provides a general overview of green science and technology and their essential role in ensuring environmental sustainability Written by a leading expert the book provides the essential background for understanding green science and technology and how they relate to sustainability In addition to the hydrosphere atmosphere geosphere and biosphere traditionally covered in environmental science books this book is unique in recognizing the anthrosphere as a distinct sphere of the environment The author explains how the anthrosphere can be designed and operated in a manner that does not degrade environmental quality and in most favorable circumstances may even enhance it With the current emphasis shifting from end of pipe solutions to pollution prevention and control of resource consumption green principles are increasingly moving into the mainstream This book provides the foundation not only for understanding green science and technology but also for taking its application to the next level
