Atmospheric Pressure Plasma Treatment Of Polymers Relevance To Adhesion:

Atmospheric Pressure Plasma Treatment of Polymers Michael Thomas, K. L. Mittal, 2013-06-19 An indispensable volume detailing the current and potential applications of atmospheric pressure plasma treatment by experts practicing in fields around the world Polymers are used in a wide variety of industries to fabricate legions of products because of their many desirable traits However polymers in general and polyolefins in particular are innately not very adhesionable because of the absence of polar or reactive groups on their surfaces and concomitant low surface energy Surface treatment of polymers however is essential to impart reactive chemical groups on their surfaces to enhance their adhesion characteristic Proper surface treatment can endow polymers with improved adhesion without affecting the bulk properties A plethora of techniques ranging from wet to dry simple to sophisticated vacuum to non vacuum for polymer surface modification have been documented in the literature but the Atmospheric Pressure Plasma APP treatment has attracted much attention because it offers many advantages vis a vis other techniques namely uniform treatment continuous operation no need for vacuum simplicity low cost no environmental or disposal concern and applicability to large area samples Although the emphasis in this book is on the utility of APP treatment for enhancement of polymer adhesion APP is also applicable and effective to modulate many other surface properties of polymers superhydrophilicity superhydrophobicity anti fouling anti fogging anti icing cell adhesion biocompatibility tribological behavior etc The key features of Atmospheric Pressure Plasma Treatment of Polymers Address design and functions of various types of reactors Bring out current and potential applications of APP treatment Represent the cumulative wisdom of many key academic and industry researchers actively engaged in this key and enabling technology

Progress in Adhesion and Adhesives, Volume 6 K. L. Mittal, 2021-08-16 With the voluminous research being published it is difficult if not impossible to stay abreast of current developments in a given area The review articles in this book consolidate information to provide an alternative way to follow the latest research activity and developments in adhesion science and adhesives With the ever increasing amount of research being published it is a Herculean task to be fully conversant with the latest research developments in any field and the arena of adhesion and adhesives is no exception Thus topical review articles provide an alternate and very efficient way to stay abreast of the state of the art in many subjects representing the field of adhesion science and adhesives The 19 chapters in this Volume 6 follow the same order as the review articles originally published in RAA in the year 2020 and up to June 2021 The subjects of these 19 chapters fall in the following areas Adhesives and adhesive joints Contact angle Reinforced polymer composites Bioadhesives Icephobic coatings Adhesives based on natural resources Polymer surface modification Superhydrophobic surfaces The topics covered include hot melt adhesives adhesively bonded spar wingskin joints contact angle hysteresis fiber matrix adhesion in reinforced thermoplastic composites bioadhesives in biomedical applications mucoadhesive pellets for drug delivery applications bio inspired icephobic coatings wood adhesives based on natural resources adhesion in
