INTRODUCTION

RISK ASSESSMENT

TYPE INJURY

- The most common type of injury is to the back. These are repetitive strain injuries which affect the spine. They can be caused by:
- The type of lifting technique used
 - The weight and frequency of the loads
 - The posture and twisting of the body
 - The frequency and duration of the work
 - The frequency and duration of the work
 - The frequency and duration of the work

The purpose of a risk assessment is to identify hazardous activities or factors at the task, involving people, and then to estimate the likelihood of injury or illness occurring, and to identify measures to prevent or reduce the risk of injury or illness occurring.

The general approach for the assessment should be:

1. Identify the task, involving people, and then to estimate the likelihood of injury or illness occurring, and to identify measures to prevent or reduce the risk of injury or illness occurring.
2. Identify the task, involving people, and then to estimate the likelihood of injury or illness occurring, and to identify measures to prevent or reduce the risk of injury or illness occurring.
3. Identify the task, involving people, and then to estimate the likelihood of injury or illness occurring, and to identify measures to prevent or reduce the risk of injury or illness occurring.
