Brain-Based Worship Paula Champion-Jones, 2014-10-07 Historically, it has been believed that Christian formation occurs primarily in the context of worship. Because both traditional and contemporary worship services are routinely structured around the skills of persuasive rhetoric and logic, most worship services effectively ignore the impact of experiential embodied knowledge. Recent research in neuroscience has proven that humans are sensory-motor emotional thinking beings who learn best when body, brain, and emotions are simultaneously engaged. A fresh paradigm for teaching brain-based learning is proving to result in learning that is more memorable, more likely to result in long-term change in the behavior of the learner, and more likely to spur the learner to investigate the subject further. The Church needs to employ brain-based teaching methods in order to more effectively transmit the Gospel.

Paradigm Shifts in 21st Century Teaching and Learning Orakci, Şenol, 2020-04-24. One of the most important transformations in the world today is the adaptation to education and teaching methods that must be made to enhance the learning experience for Millennial and Generation Z students. The system in which the student is passive and the teacher is active is no longer the most effective form of education. Additionally, with the increased availability to information, knowledge transfer is no longer done solely by the teacher. Educators need to become moderators in order to promote effective teaching practices. *Paradigm Shifts in 21st Century Teaching and Learning* is an essential scholarly publication that examines new approaches to learning and their application in the teaching-learning process. Featuring a wide range of topics such as game-based learning, curriculum design, and sustainability, this book is ideal for teachers, curriculum developers, instructional designers, researchers, education professionals, administrators, academicians, educational policymakers, and students.
