Wildflowers of Houston and Southeast Texas John L. Tveten, Gloria Tveten, 2010-07-05 You ll find them throughout the year in Houston lyre leaf sage Drummond skullcap silver leaf nightshade snow on the prairie lemon beebalm scarlet pimpernel plains wild indigo spring ladies tresses deer pea vetch These wildflowers and hundreds of other species flourish in this part of Texas but until this book was published in 1993 no guide had focused exclusively on the Houston area John and Gloria Tveten spent years seeking out both the common and the rare flowers They describe here more than 200 plants A color photograph of each one will make identification easy The guide is arranged by color with each entry tracing the history and lore of a species Many plants for example prairie Indian plantain and self heal were used by Native Americans for medicinal purposes Others like poke weed and wapato are edible Southern dewberry and giant ragweed are used as natural dyes And some like rattlebush and milkweed are poisonous At the end of each species account is a list of key identifying characteristics for quick reference in the field Summaries of plant families are also included as well as tips on where and when to look for wildflowers *Native Host Plants for Texas Butterflies* Jim Weber, Lynne M. Weber, Roland H.

Wauer, 2018-08-01 While many growers focus on attracting adult butterflies to their gardens fewer know about the plants that caterpillars need to survive Native host plants wildflowers trees shrubs vines grasses and sedges not only provide a site for the butterfly to lay its eggs they also provide a ready food source for the emerging caterpillar Think of these plants as the nurseries of the garden This user friendly heavily illustrated field guide describes 101 native larval host plants in Texas Each species account includes descriptive information on each plant a distribution map and photos of both the caterpillars and

adult butterflies who frequent those plants An adult butterfly may nectar on a wide variety of flowers but caterpillars are much more restricted in their food sources Some feed on only a limited number of plant species so female butterflies seek out these specific plants to lay their eggs For example the host plants for Monarch caterpillars are various species of milkweed Often these plants are not the same as the ones the adult butterfly will later use for nectar Learning more about the plants caterpillars need is crucial for butterfly conservation Butterflies dependency on specific caterpillar host plants is one of the key factors restricting their range and distribution Armed with this knowledge readers can also hone their ability to find specific species of breeding butterflies in nature This is a handy guide whether you are in the field searching for butterflies or on the hunt for butterfly friendly options at your local plant sale
