Beyond Shanghai and PISA Binyan Xu, Yan Zhu, Xiaoli Lu, 2021-05-07 This book seeks to illustrate the research on mathematics competencies and disposition in China according to the conceptual development and empirical investigation perspective Mathematics education in China has a distinguishing feature a focus of attention to mathematical competency Paradoxically there has not been an explicit refined and measurable evaluation system in place to assess mathematical competency in China While academic achievement surveys or evaluations are common these can only give an overall conclusion about mathematical thinking skills or problem solving abilities In response to this deficiency China is beginning to carry out national projects that emphasize defining both a conceptual framework on core competencies in school mathematics and developing a corresponding assessment framework Thus the main focus of this volume is the current

investigations of different mathematics competencies and mathematical disposition of Chinese students with the aim of promoting interaction between domestic and international student performance assessment to provide a more comprehensive understanding of mathematics competencies and disposition in mainland China and to stimulate innovative new directions in research. The primary audience of this volume is the large group of researchers interested in mathematics competencies, mathematics teaching and learning in China or comparative studies or the relation of the three. The book will also appeal to teaching trainers or instructors as well as be an appropriate resource for graduate courses or seminars at either the master's or doctoral level.

Big Ideas in Primary Mathematics Robert Newell, 2016-11-14

Lightbulb moments for you and your pupils. This book explores the big ideas in maths to help trainee teachers confidently teach the curriculum in a way that engages children and focuses on understanding rather than memory for those lightbulb moments. Covering the major concepts in simple terms whilst carefully linking to the National Curriculum, it shows how they can be used to enable learning and support mathematical mastery. A focus on explaining misconceptions and errors will strengthen trainees and teachers' own mathematical subject knowledge while also giving them the confidence to deepen their understanding of the children they teach. Key topics include Problem solving, reasoning and developing fluency in maths, Place value and counting systems, Measuring money, time and weight, Geometry and understanding space and shape, Fractions and statistics for the primary classroom. This is essential reading for anyone studying primary mathematics on initial teacher education courses including undergraduate BEd BA with QTS and postgraduate PGCE PGDE School Direct SCITT routes and also NQTs. Robert Newell is a tutor in primary education at the UCL Institute of Education, London.

Mindset Mathematics: Visualizing and Investigating Big Ideas, Grade 7 Jo Boaler, Jen Munson, Cathy Williams, 2019-08-27

Engage students in mathematics using growth mindset techniques. The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low floor, high ceiling tasks that will help you do just that by looking at the big ideas at the seventh grade level through visualization, play and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson and Cathy Williams heard the same message: that they want to incorporate more brain science into their math instruction but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement with tasks that reflect the latest brain science on learning. Open, creative and visual math tasks have been shown to improve student test scores and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that there is no such thing as a math person; anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject and our brains want to think visually about mathematics. With engaging questions, open-ended

tasks and four color visuals that will help kids get excited about mathematics Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards CCSS and can be used with any current curriculum Mindset Mathematics: Visualizing and Investigating Big Ideas, Grade 1 Jo Boaler, Jen Munson, Cathy Williams, 2021-01-15
