

Exercise Three

Aerial Photographs, Satellite Images, and Topographic Maps

MATERIALS REQUIRED

The following materials are necessary to complete this exercise and should be available in the laboratory. The quantities depend upon the number of students in the laboratory and whether or not students are to work independently or in groups.

stereoscope

ruler

topographic map (preferably local)

hand lens or magnifying glass

Note: A drafting compass, divider, or piece of string can be useful for measuring distance on a topographic map, especially the length of a river.

PROCEDURES AND STRATEGIES

- Due to the length of the exercise, some sections may have to be completed outside of the allotted laboratory time or, at the discretion of the instructor, eliminated.
- Some students may not have the capability of stereoscopic vision. Only minor adjustments will be necessary for these students to successfully complete the exercise.
- To complete the entire exercise requires the use of a USGS topographic map that illustrates the Public Land Survey (PLS) system for designating the location of land areas. If you wish to use a map from a region that has not been surveyed with the PLS, then either the exercise will have to be modified or more than one map will be necessary.
- To illustrate different scales, we recommend that samples of the various types of USGS topographic maps be displayed in the laboratory and that students be encouraged to look at them.
- Some students have difficulty working with topographic contours and/or topographic profiles. Often having access to raised relief maps or models helps them understand these concepts.
