

When moving under poor lighting conditions, the bow and stern lights should be on.

1. Install the stern light pole in the socket, making sure the tab on the pole lines up with the groove on the socket.
2. Put the light switch on the control panel to the "NAV" position. (10.6 and 11.3 only)
3. On the 10.2, the navigation lights are operated by installing the lights into the sockets. When not moving under poor lighting conditions, only the stern light needs to be on.

Traveling Across the Water

Do not be concerned if you notice a slight hull flexing during use. The boat is designed to flex and absorb minor bumps without damage. This flexing is one of the great advantages of polyethylene.

Trim / Planing all models except 10.6

Except for the 10.6 model, these boats are not designed to plane. However, they will travel smoothly if loaded and trimmed properly.

With most outboard motors, you can adjust the trim. This is the angle between the power unit of the motor (prop) and the transom of the boat.

If the motor is angled out too far, the bow will rise sharply when power is applied.

MODEL Bass Tender 11.3

Bass Tender Owners Manual
