Behavioral Neurobiology Of Alcohol Addiction Current Topics In Behavioral Neurosciences:

Behavioral Neurobiology of Alcohol Addiction Wolfgang Sommer, Rainer Spanagel, 2012-07-28 The question how alcohol alters mood states and why this may end up becoming an addiction is puzzling alcohol researchers since decades In this volume an assembly of highly distinguished experts and leaders in alcohol addiction research provides lucid presentations of the current knowledge and research challenges as well as interesting viewpoints on future research directions aimed to stimulate communication and convergence between clinical and preclinical researchers and to renew interest in the vibrant field of alcohol addiction research among a wide scientifically minded audience Five Current Topics are discussed in this volume Neurobiological mechanisms of alcoholism Genetics Clinical phenotypes and their preclinical models Brain imaging and Translational approaches for treatment development both pharmacological and non pharmacological These areas have in our opinion brought alcohol research substantially forward and influenced our thinking about how to reach our common paramount goal namely to offer effective treatment solutions for an extensive group of patients with largely unmet medical needs

Behavioral Neuroscience of Alcohol Addiction Wolfgang H. Sommer, Rainer Spanagel, 2025-09-30 Behavioral Neurobiology of Alcohol Addiction explores the forefront of addiction research integrating fundamental neurobiological mechanisms with translational insights into human phenotypes Alcohol addiction remains a major public health concern with extensive medical and societal implications Understanding its intricate interplay between neurobiology behavior and treatment is essential for developing effective interventions This edition is structured into two volumes Basic Mechanisms and Animal Studies and Translational Studies and Human Phenotypes The first volume examines addiction conceptualization stress and reward systems and chronic pain It further explores the cellular synaptic and circuit level consequences of alcohol incorporating computational and neuroimaging approaches It also addresses the replication crisis in preclinical research and proposes guidelines to mitigate its impact The second volume shifts the focus to human studies covering human laboratory approaches ecological momentary assessment molecular imaging and the challenges of bridging preclinical and clinical research The book also highlights emerging treatments including psychological interventions neuromodulation techniques and the role of the gut brain axis Alcohol use fundamentally alters mood states via brain mechanisms an insight widely acknowledged by experts and laypeople alike However debates surrounding the brain disease model of addiction have intensified in recent years This collection of articles contributes to this ongoing discussion by reinforcing the importance of a neurobiological perspective in addiction science and demonstrating how advances in neuroscience translate into more effective therapeutic approaches Written by leading experts in the field both volumes provide a comprehensive yet accessible resource for addiction researchers neuroscientists clinicians and students The book aims to deepen the understanding of alcohol addiction and inspire new directions in research and treatment

Behavioral Neuroscience of Drug Addiction David W. Self, Julie K. Staley Gottschalk, 2009-12-18

Drug addiction is a chronically relapsing mental illness involving severe motivational disturbances and loss of behavioral control leading to personal devastation The disorder affects millions of people often co-occurring with other mental illnesses with enormous social and economic costs to society Several decades of research have established that drugs of abuse hijack the brain's natural reward substrates and that chronic drug use causes aberrant alterations in these reward processing systems Such aberrations may be demonstrated at the cellular neurotransmitter and regional levels of information processing using either animal models or neuroimaging in humans following chronic drug exposure Behaviorally these neural aberrations manifest as exaggerated altered or dysfunctional expression of learned behavioral responses related to the pursuit of drug rewards or to environmental factors that precipitate craving and relapse during periods of drug withdrawal Current research efforts are aimed at understanding the associative and causal relationships between these neurobiological and behavioral events such that treatment options will ultimately employ therapeutic amelioration of neural deficits and restoration of normal brain processing to promote efforts to abstain from further drug use The Behavioral Neuroscience of Drug Addiction part of the Springer series on Current Topics in Behavioral Neurosciences contains scholarly reviews by noted experts on multiple topics from both basic and clinical neuroscience fields
