Integrated Drainage Systems Planning and Design for Municipal Engineers Patrick Ssempeera, 2023-05-05 Urban water management has to take an integrated approach that prioritizes sustainable drainage systems SuDS over gray infrastructure This book elaborates on the planning and evaluation of pipework drainage systems with a focus on modern day constraints to deliver a solution that favors sustainability as the overarching goal The book includes a technical section on design of gray and green infrastructure considering the total lifecycle costs of drainage systems Advanced computer simulation techniques are discussed after covering the derivation of both standard and empirical equations for appropriate hydrology and hydraulics The book provides an incorporation of reliability analyses for both green and gray infrastructure starting with techniques for forecasting flows hydraulic performance and lifecycle costs The work also involves 3 D modeling geospatial and big data analysis and how these techniques are applied into city management particularly beneficial to municipal engineers who are increasingly becoming involved in mapping the underground Soil mechanics and subsurface drainage systems are analyzed and structural aspects of sewers are included Finally soil behavior in shear retaining wall structures and tunneling is briefly featured in the book This book will be of interest to under graduate and postgraduate engineering students drainage engineers urban planners architects water engineers developers construction contractors and municipal engineers
