Bayesian Disease

Mapping Byron J. T. Morgan, Terry Speed, Peter Van Der Heijden, Niels Keiding, 2009 In line with the recent growth of Bayesian methods applied to the modeling of geo referenced health data Bayesian Disease Mapping presents a practical overview of Bayesian modeling and computation in disease mapping It covers various application areas including disease map reconstruction disease cluster detection multi scale disease mapping spatio temporal models spatial survival analysis spatial longitudinal analysis and latent structure models This book features a wide range of detailed case studies to illustrate how the methods can be applied The author implements all examples using R and WinBUGS and provides additional code and datasets available for download on the web

Using R for Bayesian Spatial and Spatio-Temporal Health Modeling

Andrew B. Lawson, 2021-04-28 Progressively more and more attention has been paid to how location affects health outcomes The area of disease mapping focusses on these problems and the Bayesian paradigm has a major role to play in the understanding of the complex interplay of context and individual predisposition in such studies of disease Using R for Bayesian Spatial and Spatio Temporal Health Modeling provides a major resource for those interested in applying Bayesian methodology in small area health data studies Features Review of R graphics relevant to spatial health data Overview of Bayesian methods and Bayesian hierarchical modeling as applied to spatial data Bayesian Computation and goodness of fit Review of basic Bayesian disease mapping models Spatio temporal modeling with MCMC and INLA Special topics include multivariate models survival analysis missing data measurement error variable selection individual event modeling and infectious disease modeling Software for fitting models based on BRugs Nimble CARBayes and INLA Provides code relevant to fitting all examples throughout the book at a supplementary website The book fills a void in the literature and available software providing a crucial link for students and professionals alike to engage in the analysis of spatial and spatio temporal health data from a Bayesian perspective using R The book emphasizes the use of MCMC via Nimble BRugs and CARBayes but also includes INLA for comparative purposes In addition a wide range of packages useful in the analysis of geo referenced spatial data are employed and code is provided It will likely become a key reference for researchers and students from biostatistics epidemiology public health and environmental science

Disease Mapping with WinBUGS and MLwiN Andrew B. Lawson, William J. Browne, Carmen L. Vidal Rodeiro, 2003-09-12 Disease mapping involves the analysis of geo referenced disease incidence data and has many applications for example within resource allocation cluster alarm analysis and ecological studies There is a real need amongst public health workers for simpler and more efficient tools for the analysis of geo referenced disease incidence data Bayesian and multilevel methods provide the required efficiency and with the emergence of software packages such as WinBUGS and MLwiN are now easy to implement in practice Provides an introduction to Bayesian and multilevel modelling in disease mapping Adopts a practical approach

with many detailed worked examples Includes introductory material on WinBUGS and MLwiN Discusses three applications in detail relative risk estimation focused clustering and ecological analysis Suitable for public health workers and epidemiologists with a sound statistical knowledge Supported by a Website featuring data sets and WinBUGS and MLwiN programs Disease Mapping with WinBUGS and MLwiN provides a practical introduction to the use of software for disease mapping for researchers practitioners and graduate students from statistics public health and epidemiology who analyse disease incidence data Evaluation of Fully Bayesian Disease Mapping Models in Correctly Identifying High-risk Areas with an Application to Multiple Sclerosis Katia Charland, 2007 Disease maps are geographical maps that display local estimates of disease risk When the disease is rare crude risk estimates can be highly variable leading to extreme estimates in areas with low population density Bayesian hierarchical models are commonly used to stabilize the disease map making them more easily interpretable By exploiting assumptions about the correlation structure in space and time the statistical model stabilizes the map by shrinking unstable extreme risk estimates to the risks in surrounding areas local spatial smoothing or to the risks at contiguous time points temporal smoothing Extreme estimates that are based on smaller populations are subject to a greater degree of shrinkage particularly when the risks in adjacent areas or at contiguous time points do not support the extreme value and are more stable themselves
