Beyond Natural Selection Robert G. Wesson, Robert Wesson, 1993 proposes an approach to evolution that is more in harmony with modern science than Darwinism or neo Darwinism **Beyond Natural Selection** Robert G. Wesson, 1991

The Computational Beauty of Nature Gary William Flake, 2000-01-27 Gary William Flake develops in depth the simple idea that recurrent rules can produce rich and complicated behaviors In this book Gary William Flake develops in depth the simple idea that recurrent rules can produce rich and complicated behaviors Distinguishing agents e g molecules cells animals and species from their interactions e g chemical reactions immune system responses sexual reproduction and evolution Flake argues that it is the computational properties of interactions that account for much of what we think of as beautiful and interesting From this basic thesis Flake explores what he considers to be today s four most interesting computational topics fractals chaos complex systems and adaptation Each of the book s parts can be read independently enabling even the casual reader to understand and work with the basic equations and programs Yet the parts are bound together by the theme of the computer as a laboratory and a metaphor for understanding the universe The inspired reader will experiment further with the ideas presented to create fractal landscapes chaotic systems artificial life forms genetic algorithms and artificial neural networks **Information, Knowledge, Evolution and Self** Wayne Talbot, 2016-02-04 To

understand this subject in relation to the overarching narrative of evolution one must first understand a simple scientific fact one that is generally hidden by imprecise language Material storage devices irrespective of whether they be synthetic or organic do NOT and CANNOT store information The same is to be said for communications of any form through any media I realise that this may be difficult to accept so let me explain Firstly the word information is the noun equivalent of the verb to inform and thus if a communication does not inform you it is not information to you It may be information to somebody else but that is irrelevant in the context of an individual s cognitive processing and knowledge In the context of evolution we must always consider the individual organism for that is where the mechanisms of evolution are said to occur before impacting a wider group This is not a science book in the accepted sense for I am not a scientist The target readership is people like myself well educated in a number of fields enthusiastic amateurs if you like but willing and able to see through the fog of technical language and unsupported assertions to discern the truth for themselves Of course I would welcome readership amongst the scientific community but such people should understand that some of the rigorous norms of scientific publications are absent from this work **Crossing a Chasm** Wayne Talbot, 2021-03-11 The author started his working

career as an Air Traffic Control Officer in the Royal Australian Air Force and after resigning his commission spent thirty five years in the Information Services industry In the context of his writings he describes himself as an analyst by aspiration inclination proclivity training and occupation His books reflect his primary intellectual pursuit explanations given for human existence by both religions and evolution Having published several analyses including Religion Of God or Man and Seeking

After God he concluded that there was nothing more that he could learn on that subject the issue remained an enduring mystery Returning to the other explanation evolution he had long wanted to complete a more thorough analysis of evolution theory than as presented in his earlier publications The Dawkins Deficiency and Information Knowledge Evolution and Self This required that he acquire and study dozens of academic books and other publications seeking to understand the plausibility and at times hollowness of scientific explanations Using his background knowledge of relevant technologies he was able to identify parallels between modern automation and mechanisation and human biological processes One of particular interest was an analysis of the technical similarities between the human sensory system and modern telemetry systems With a lifelong passion for a travel and a modest appetite for adventure he has trekked in the Khumbu and Annapurna regions of Nepal the Peruvian Andes and Patagonia His hobby apart from writing has been a love of all things motorcycling from touring remote areas and attending races to complete restoration of vintage motorcycles He has motorcycled throughout parts of his native Australia North America New Zealand Iceland Bolivia Peru Turkey the Himalaya Morocco Greece and eastern Europe His business and holiday travels have taken him through sixty countries and all continents including Antarctica Evolution is defined as the change in the heritable characteristics of biological populations over successive generations resulting in changes in both the genotype and phenotype The evidence for evolution is primarily circumstantial being based on fossils of extinct species physical similarities and a largely common genome Charles Darwin believed that all species of organisms arise and develop through the natural selection of small inherited variations that increase the individual s ability to compete survive and reproduce Today we know so much more than Darwin did 150 years ago leading many scientists to discard genetic mutation and natural selection as having the development power previously ascribed to them What has been missing in the science so far is systems thinking a holistic approach to analysis that focuses on the way that a system s constituent parts interrelate and how systems work over time and within the context of larger systems Questioning whether the mind consists of organs of the brain an emergent property of the brain or activities of the brain as scientists suggest the author has concluded for none of these The brain being physical it can only deal with the physical but the mind deals in the conceptual which has no physical properties With his background in related technologies the author has compared the human nervous system with telemetry systems as used in modern aircraft vehicles and other applications Though implemented differently the functional requirements remain the same which has prompted a different perspective on how it could have evolved The telemetry system in the human body is astounding in its complexity accuracy and reliability leading to the author s doubts as to its claimed evolutionary origins Crossing a Chasm is an analysis of the probability that such could be accomplished by innumerable unguided small steps over whatever time

The Creative Conscience as Human Destiny Eduard Hugo Strauch, 2004 The Creative Conscience as Human Destiny explains how human nature derived from our biogenetic evolution Whereas human ingenuity and self realization replicate nature s

creativity its morphogenesis human conscience epitomizes the integration of organic life its symbiosis These mutual processes became incarnate as humanity's creative conscience Similarly the co evolution of man and woman has enabled us to create cultures and civilization From our intimation of a Supreme Being in nature human beings have also evolved a supraconscience By acknowledging the wisdom of nature we have a philosophy of life for the future Romancing the Mind Wayne Talbot, 2021 To romance to tell stories that are not true or to describe an event in a way that makes it sound better than it was in this case more scientific than it is A myth is not always a fairy story but most often the presentation of facts belonging to one category in the idioms appropriate to another Usually there is some factual basis for the narrative This book seeks to expose neuromythology mythology developed by scientists in their attempts to describe the human mind in material and mechanistic terms Religion? of God or Man? Wayne Talbot, 2019-02-09 Is there evidence for the existence of God defined as the transcendent entity responsible for all material existence The author believes that there is albeit such evidence is not necessarily proof for everyone In this two part study Wayne Talbot firstly presents the evidence that has convinced him that God is the most plausible explanation With a limited but sufficient understanding of the nature of existence in terms of energy matter space and time he demonstrates his primary axiom that nothing can explain itself The natural corollary of this is that scientists will never be able to explain the origins of material existence by examining the material itself An explanation of origins must always lie outside the entity being examined This is why scientists cannot explain the origin of the proposed singularity and why some scientists seek an alternative to the Big Bang model of our universe even resorting to logical absurdities such as the universe creating itself out of nothing while in the presence of something With the reality of God being his presupposition for what follows the author examines the case for monotheistic religions versus polytheistic concluding that the latter are antithetical to a God who is one Left with a choice between Judaism Christianity and Islam he concludes that if God has communicated his guidance for living to any it is most likely Judaism as recorded in the Hebrew scriptures The question becomes Which parts of those scriptures were intended for the children of Israel alone and which were for all people for all time Researching ever deeper he reveals what he has come to believe about how God wants us to relate to him and the specific guidance that should be reworded for contemporary times The spirit of Torah is so much more than the mere words **God** Kelly Ryan Harriger, 2009-05 Does God really exist Or is He just a grandiose delusion passed down through the millennia to help us deal with our nagging need to find a purpose for our existence The author grew up in a believing household never questioning the existence of God but as he grew older and more interested in his faith he developed a driving need to know whether or not his faith was justified A totally blind faith one that couldn't be supported with any hard evidence just wouldn't do If God was real then He must have left a trail of evidence for a rational thinker to follow But if there wasn't any trail to follow then all faith would be blind and any faith would do as it would become little more than a set of guidelines to follow in an attempt to lead a spiritual and moral life The

author began his exploratory journey with a set of questions that needed to be answered Do any of the world s religious scriptures reveal information that has parallels in scientific discovery Do any of the world s religious scriptures offer specific prophecies that have unfolded in recorded history And lastly did any of the world s religious scriptures provide a blueprint for living that could drastically change one s life from the inside out As he sought answers to these questions he discovered an overwhelming amount of supporting evidence but it came with a catch it all pointed in one decisive direction KELLY RYAN HARRIGER lives in Pennsylvania He spent most of his working career in Los Angeles California as a professional writer in the world of advertising marketing and entertainment before returning to his boyhood home in Pennsylvania where he now works as a marketing and advertising consultant for small businesses and non profit groups **Beyond Mechanism** Brian G. Henning,Adam Scarfe,2013-02 It has been said that new discoveries and developments in the human social and natural sciences hang in the air Bowler 1983 2008 prior to their consummation While neo Darwinist biology has been powerfully served by its mechanistic metaphysic and a reductionist methodology in which living organisms are considered machines many of the chapters in this volume place this paradigm into question Pairing scientists and philosophers together this volume explores what might be termed the New Frontiers of biology namely contemporary areas of research that appear to call an updating a supplementation or a relaxation of some of the main tenets of the Modern Synthesis Such areas of investigation include Emergence Theory Systems Biology Biosemiotics Homeostasis Symbiogenesis Niche Construction the Theory of Organic Selection also known as the Baldwin Effect Self Organization and Teleodynamics as well as Epigenetics Most of the chapters in this book offer critical reflections on the neo Darwinist outlook and work to promote a novel synthesis that is open to a greater degree of inclusivity as well as to a more holistic orientation in the biological sciences
