You can learn how to make a proper pipe joint for welding or how to Weld pipe supports and steel structures and teach yourself to be a master of the fitter's or welder's craft with the step by step instructions, learning tools and equipment. A pipe fitter and welder are the tradesperson who install, assemble, fabricate, maintain and repair mechanical piping systems. Pipe fitters usually begin as helpers or apprentices. A pipe fitter and welder deal with industrial, commercial, marine piping and heating/cooling systems. Typical industrial process pipe is under high pressure which requires metals such as carbon steel, stainless steel and many different alloy metals fused together through precise cutting, threading, grooving, bending and welding. Pipe fitter and welder plan and test piping and tubing layouts, cut, bend or fabricate pipe or tubing segments and join those segments by threading them using lead joints, welding, brazing, cementing or soldering them together. They install manual, pneumatic, hydraulic and electric valves in pipes to control the flow through the pipes or tubes. These workers create the system of tubes in boilers and make holes in walls and bulkheads to accommodate the passage of the pipes. They install. Pipe fitter and welder are often exposed to hazardous or dangerous materials such as asbestos, lead, ammonia, steam, flammable gases, various resins and solvents including benzene and various refrigerants.
