Adaptive Filtering And Change Detection:

Adaptive Filtering and Change Detection Fredrik Gustafsson, 2000-10-03 Adaptive filtering is a branch of digital signal processing which enables the selective enhancement of desired elements of a signal and the reduction of undesired elements Change detection is another kind of adaptive filtering for non stationary signals and is the basic tool in fault detection and diagnosis This text takes the unique approach that change detection is a natural extension of adaptive filtering and the broad coverage encompasses both the mathematical tools needed for adaptive filtering and change detection and the applications of the technology Real engineering applications covered include aircraft automotive communication systems signal processing and automatic control problems The unique integration of both theory and practical applications makes this book a valuable resource combining information otherwise only available in separate sources Comprehensive coverage includes many examples and case studies to illustrate the ideas and show what can be achieved Uniquely integrates applications to airborne automotive and communications systems with the essential mathematical tools Accompanying Matlab toolbox available on the web illustrating the main ideas and enabling the reader to do simulations using all the figures and numerical examples featured This text would prove to be an essential reference for postgraduates and researchers studying digital signal processing as well as practising digital signal processing engineers

Multitemporal Remote Sensing Yifang Ban, 2016-12-01 Written by world renowned scientists this book provides an excellent overview of a wide array of methods and techniques for the processing and analysis of multitemporal remotely sensed images These methods and techniques include change detection multitemporal data fusion coarse resolution time series processing and interferometric SAR multitemporal processing among others A broad range of multitemporal datasets are used in their methodology demonstrations and application examples including multispectral hyperspectral SAR and passive microwave data This book features a variety of application examples covering both land and aquatic environments Land applications include urban agriculture habitat disturbance vegetation dynamics soil moisture land surface albedo land surface temperature glacier and disaster recovery Aquatic applications include monitoring water quality water surface areas and water fluctuation in wetland areas spatial distribution patterns and temporal fluctuation trends of global land surface water as well as evaluation of water quality in several coastal and marine environments This book will help scientists practitioners students gain a greater understanding of how multitemporal remote sensing could be effectively used to monitor our changing planet at local regional and global scales

Networked Filtering and Fusion in Wireless Sensor Networks Magdi S. Mahmoud, Yuanqing Xia, 2014-12-20 By exploiting the synergies among available data information fusion can reduce data traffic filter noisy measurements and make predictions and inferences about a monitored entity Networked Filtering and Fusion in Wireless Sensor Networks introduces the subject of multi sensor fusion as the method of choice for implementing distributed systems

Signal and Image Processing for Remote Sensing C.H. Chen, 2006-10-09 Most data from satellites are in image

reviews while only several submissions received three reviews Each submission was handled by an Area Chair who coordinated discussions among reviewers and made recommendation on the submission The Program Committee Chairs examined the reviews and meta reviews to further guarantee the reliability and integrity of the reviewing process Twenty nine pers were selected after this process To ensure that important revisions required by reviewers were incorporated into the nal accepted papers and to allow submissions which would have tential after a careful revision this year we launched a revision double check process In short the above mentioned 29 papers were conditionally accepted and the authors were requested to incorporate the important and must re sionssummarizedbyareachairbasedonreviewers comments Therevised nal version and the revision list of each conditionally accepted paper was examined by the Area Chair and Program Committee Chairs Papers that failed to pass the examination were nally rejected

Diagnosis and Fault-Tolerant Control Mogens Blanke, Michel Kinnaert, Jan Lunze, Marcel Staroswiecki, 2015-08-11 Fault tolerant control aims at a gradual shutdown response in automated systems when faults occur It satisfies the industrial demand for enhanced availability and safety in contrast to traditional reactions to faults which bring about sudden shutdowns and loss of availability The book presents effective model based analysis and design methods for fault diagnosis and fault tolerant control Architectural and structural models are used to analyse the propagation of the fault through the process to test the fault detectability and to find the redundancies in the process that can be used to ensure fault tolerance It also introduces design methods suitable for diagnostic systems and fault tolerant controllers for continuous processes that are described by analytical models of discrete event systems represented by automata The book is suitable for engineering students engineers in industry and researchers who wish to get an overview of the variety of approaches to process diagnosis and fault tolerant control The authors have extensive teaching experience with graduate and PhD students as well as with industrial experts Parts of this book have been used in courses for this audience The authors give a comprehensive introduction to the main ideas of diagnosis and fault tolerant control and present some of their most recent research achievements obtained together with their research groups in a close cooperation with European research projects The third edition resulted from a major re structuring and re writing of the former edition which has been used for a decade by numerous research groups New material includes distributed diagnosis of continuous and discrete event systems methods for reconfigurability analysis and extensions of the structural methods towards fault tolerant control The bibliographical notes at the end of all chapters have been up dated The chapters end with exercises to be used in lectures
