Adaptive Data Compression Author Ross N Williams Jan 1991:

Data Compression David Salomon, 2006-05-09 Data compression is one of the most important fields and tools in modern computing. From archiving data to CD ROMs and from coding theory to image analysis many facets of modern computing rely upon data compression. Data Compression provides a comprehensive reference for the many different types and methods of compression. Included are a detailed and helpful taxonomy analysis of most common methods and discussions on the use and comparative benefits of methods and description of how to use them. The presentation is organized into the main branches of the field of data compression: run length encoding, statistical methods, dictionary based methods, image compression, audio compression, and video compression. Detailed descriptions and explanations of the most well known and frequently used compression methods are covered in a self contained fashion with an accessible style and technical level for specialists and nonspecialists. Topics and features coverage of video compression including MPEG 1 and H 261, thorough coverage of wavelets methods including CWT, DWT, EZW and the new Lifting Scheme technique, complete audio compression, QM coder used in JPEG and JBIG including new JPEG 2000 standard, image transformations and detailed coverage of discrete cosine transform and Haar transform, coverage of EIDAC method for compressing simple images, prefix image compression, ACB and FHM curve compression, geometric compression and edgebreaker technique. Data Compression provides an invaluable reference and guide for all computer scientists, computer engineers, electrical engineers, signal image processing engineers and other scientists needing a comprehensive compilation for a broad range of compression methods.

Forthcoming Books Rose Arny, 1994 Adaptive Data Compression Ross N. Williams, 1991 Following an exchange of correspondence I met Ross in Adelaide in June 1988. I was approached by the University of Adelaide about being an external examiner for this dissertation and willingly agreed. Upon receiving a copy of this work what struck me most was the scholarship with which Ross approaches and advances this relatively new field of adaptive data compression. This scholarship coupled with the ability to express himself clearly using figures, tables and incisive prose demanded that Ross's dissertation be given a wider audience. And so this thesis was brought to the attention of Kluwer. The modern data compression paradigm furthered by this work is based upon the separation of adaptive context modelling, adaptive statistics and arithmetic coding. This work offers the most complete bibliography on this subject I am aware of. It provides an excellent and lucid review of the field and should be equally as beneficial to newcomers as to those of us already in the field. Adaptive Data Compression Ross Neil Williams, 1993
