18. From 1975, increasing levels of industrial effluents, transported predominantly from industrialised countries, have been found in the North Atlantic region. The composition of the effluents varies, as do the levels of contamination. Several pollutants are found, but the most dangerous are the heavy metals, such as lead, mercury, and cadmium. These are transported in the dissolved form, and are therefore more readily absorbed by the organisms.

This study was not designed to explore binary health outcomes, although important questions and answers emerged that have not been addressed before. It is also important that we do not completely ignore some emerging concerns. These included emerging phenomena and important questions all over the world. Expanded studies have not been conducted yet on the impact of different cultural contexts.
