Modeling For High-frequency Design: Recent Advances Slawomir Koziel, Anna Pietrenko-dabrowska, 2022-03-04

Contemporary high frequency engineering design heavily relies on full wave electromagnetic EM analysis This is primarily due to its versatility and ability to account for phenomena that are important from the point of view of system performance Unfortunately versatility comes at the price of a high computational cost of accurate evaluation Consequently utilization of simulation models in the design processes is challenging although highly desirable The aforementioned problems can be alleviated by means of surrogate modeling techniques the most popular of which are data driven models Although a large variety of methods are available they are all affected by the curse of dimensionality This is especially pronounced in high

frequency electronics where typical system responses are highly nonlinear Construction of practically useful surrogates covering wide ranges of parameters and operating conditions is a considerable challenge Surrogate Modeling for High Frequency Design presents a selection of works representing recent advancements in surrogate modeling and their applications to high frequency design Some chapters provide a review of specific topics such as neural network modeling of microwave components while others describe recent attempts to improve existing modeling methodologies Furthermore the book features numerous applications of surrogate modeling methodologies to design optimization and uncertainty quantification of antenna microwave and analog RF circuits

Handbook of Parallel Computing and Statistics Erricos John Kontoghiorghes, 2005-12-21 Technological improvements continue to push back the frontier of processor speed in modern computers Unfortunately the computational intensity demanded by modern research problems grows even faster Parallel computing has emerged as the most successful bridge to this computational gap and many popular solutions have emerged based on its concepts

Recent Developments in Biologically Inspired Computing Leandro N. De Castro, Fernando J. Von Zuben, 2005-01-01 Recent Developments in Biologically Inspired Computing is necessary reading for undergraduate and graduate students and researchers interested in knowing the most recent advances in problem solving techniques inspired by nature This book covers the most relevant areas in computational intelligence including evolutionary algorithms artificial neural networks artificial immune systems and swarm systems It also brings together novel and philosophical trends in the exciting fields of artificial life and robotics This book has the advantage of covering a large number of computational approaches presenting the state of the art before entering into the details of specific extensions and new developments Pseudocodes flow charts and examples of applications are provided so as to help newcomers and mature researchers to get the point of the new approaches presented

Metaheuristics for Big Data Clarisse Dhaenens, Laetitia Jourdan, 2016-08-29 Big Data is a new field with many technological challenges to be understood in order to use it to its full potential These challenges arise at all stages of working with Big Data beginning with data generation and acquisition The storage and management phase presents two critical challenges infrastructure for storage and transportation and conceptual models Finally to extract meaning from Big Data requires complex analysis Here the authors propose using metaheuristics as a solution to these challenges they are first able to deal with large size problems and secondly flexible and therefore easily adaptable to different types of data and different contexts The use of metaheuristics to overcome some of these data mining

challenges is introduced and justified in the first part of the book alongside a specific protocol for the performance evaluation of algorithms. An introduction to metaheuristics follows. The second part of the book details a number of data mining tasks including clustering, association rules, supervised classification, and feature selection, before explaining how metaheuristics can be used to deal with them. This book is designed to be self-contained so that readers can understand all of the concepts discussed within it and to provide an overview of recent applications of metaheuristics to knowledge discovery problems in the context of Big Data.
